## Liability Statement

Do not attempt to operate or repair the Direct-to-Card Printer without adequate training. Any use, operation, or repair in violation of this User Guide is at your own risk. You assume all liability reasonable to your use or misuse of the Direct-to-Card Printer. HID Global Corporation assumes no liability whatsoever for damages of any kind, including without limitation incidental, special or consequential damages. The Direct-to-Card Printer specifications, applications and options are subject to change at the discretion of HID Global Corporation without notice.

## Trademarks

HID GLOBAL, HID, the HID logo, DTC and FARGO are the trademarks or registered trademarks of HID Global Corporation or its licensors in the U.S. and other countries.

## Trademark Acknowledgments

Other trademarks and trade names may be used in this document to refer to either entities claiming the marks and names or their products.

## Revision History

The revision number for this document will be updated to reflect changes, corrections, updates and enhancements to this document.

Revision Control Number	Date	Document Title
Revision 1.0	October 2013	DTC4500e Card Printer User Guide

# 1 Specifications

The purpose of this section is to provide you with specific information on the Regulatory Compliances, Agency Listings, Technical Specifications and Functional Specifications for the DTC4500E Card Printer User Guide.

## 1.1 Regulatory Compliance

<b>UL</b>	The Card Printer is listed under UL 60950-1 (2 <sup>nd</sup> edition) Information Technology Equipment <b>File Number:</b> E145118 <b>Note:</b> This product is intended to be supplied by a Listed Power Unit marked Class 2 and rated for 24 V dc, 3.3A minimum.
<b>CSA</b>	The printer manufacturer has been authorized by UL to represent the Card Printer as CSA Certified under CSA Standard C22.2 No. 60950-1-07 2 <sup>nd</sup> edition <b>File Number:</b> E145118
<b>FCC</b>	The Card Printer complies with the requirements in Part 15 of the FCC rules for a Class A digital device.
<b>CE</b>	The Card Printer has been tested and complies with EN300-330-1, EN300-330-2, EN301-489-1, EN301-489-3, EN55022 class A, EN55024, EN6100-3-2, EN6100-3-3, EN60950-1. <b>Note:</b> Based on the above testing, the printer manufacturer certifies that the Card Printer complies with the following European Council Directives and has placed the CE mark on the Card Printer. LVD 2006/95/EC, EMC 2004/108/EC, R&TTE 1999/5/EC, ROHS2 2011/65/EC
<b>Environmental</b>	ENERGY STAR, RoHS2, China RoHS, Power supply Efficiency level V minimum

### 1.1.1 Agency Listings

<b>Emissions and Immunity Standards</b>	FCC Part 15 Class A, RSS-GEN, RSS 210, CNS 13438, EN55022 Class A, EN55024, EN6100-3-2, EN6100-3-3, EN300-330-1, EN300-330-2, EN301-489-1, EN301-489-3, GB9254, GB17625
<b>Safety Standards</b>	UL IEC 60950-1 (2 <sup>nd</sup> edition), CSA C22.2 No. 60950-1-07( 2 <sup>nd</sup> edition), EN60950-1, GB4943, CNS14336
<b>Additional Agency Listings</b>	CCC, BSMI, KC

### 1.1.2 United States

This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference.
- (2) This device must accept any interference received, including interference that may cause undesired operation.

**Note:** This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference; in which case, you are required to correct the interference at your expense.

**IMPORTANT:** Changes or modifications to an intentional or unintentional radiator not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

### 1.1.3 Canada

This device complies with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes : (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

### 1.1.4 Taiwan

經型式認證合格之低功率射頻電機，非經許可，公司、商號或使用者均不得擅自變更頻率、加大功率或變更原設計之特性及功能。低功率射頻電機之使用不得影響飛航安全及干擾合法通信；經發現有干擾現象時，應立即停用，並改善至無干擾時方得繼續使用。前項合法通信，指依電信法規定作業之無線電通信。低功率射頻電機須忍受合法通信或工業、科學及醫療用電波輻射性電機設備之干擾。

### 1.1.5 Japan

この装置は総務省の型式指定を受けています。"

(総務省指定番号は第AC-x x x x x号です)

本製品は電波を使用したRFID 機器の読み取り・書き込み装置です。

そのため使用する用途・場所によっては、医療機器に影響を与える恐れがあります

### 1.1.6 Korea

이 기기는 업무용(A급) 전자파 적합기기로서 판매자 또는 사용자는 이 점을 주의하시길 바라며, 가정 외의 지역에서 사용하는 것을 목적으로 합니다.

## 1.2 Safety Messages (Review Carefully)

Symbol	Critical Instructions for Safety purposes
	<p>Failure to follow these guidelines results in personal injury or death.</p> <p>To prevent personal injury or death:</p> <ul style="list-style-type: none"> <li>• <b>Reference the following safety messages before performing an operation.</b></li> <li>• <b>Always remove the power cord prior to performing repair procedures, unless otherwise specified.</b></li> <li>• <b>Ensure only qualified personnel perform these procedures.</b></li> </ul>
	<p>This device is electro statically sensitive. You may damage the device if exposing it to static electricity discharges.</p> <p>To prevent damage:</p> <ul style="list-style-type: none"> <li>• <b>Reference the following safety messages before performing an operation.</b></li> <li>• <b>Observe all established Electrostatic Discharge (ESD) procedures while handling cables in or near the Circuit Board and Printhead Assemblies.</b></li> <li>• <b>Always wear an appropriate personal grounding device.</b></li> <li>• <b>Always remove the ribbon and cards from the printer before making any repairs, unless otherwise specified.</b></li> <li>• <b>Remove jewelry and thoroughly clean hands before working on the printer.</b></li> </ul>
	<p>This symbol warns of an electrical hazard that could result in personal injury or death.</p>
	<p>For safety purposes, do not use Ethernet for a direct connection outside of the building.</p>

### 1.2.1 Taiwan

繁體中文 射頻發射及安全指令 安全訊息（小心檢查）

標記	重要的安全事項說明
<p>危險:</p> 	<p>未按照說明安裝可能造成人員傷亡。</p> <p>在可能產生潛在安全問題的地方有警示標記。（如左圖所示）。</p> <p>為了避免人員傷害，在進行有此警示標記的操作前，請先參考安全資訊提示。</p> <p>為了避免人員傷害，在沒有特別說明的情況下，修理前請關掉電源開關。</p>

標記	重要的安全事項說明
小心： 	<p>此設備對靜電很敏感。如果受到靜電放電，設備會損壞。</p> <p>在可能產生潛在靜電安全問題的地方有警示標記。（如左圖所示）。</p> <p>為了避免損壞設備，在進行有此警示標記的操作前，請先參考安全資訊提示。</p> <p>為了避免損壞設備，在排放電路板和印刷頭聯合裝置裡面或附近的電線時，請注意觀察所有的靜電放電設備。</p> <p>為了避免損壞設備，請隨時佩戴合適的接地裝置（比如：手腕上戴一個高品質的接地手腕帶以免受到可能的傷害）。</p> <p>為了避免損壞設備，如果沒有特殊說明，在做任何修理前，請取下印表機上的色帶和卡。</p> <p>為了避免損壞設備，在使用印表機之前，請摘下戒指和手上飾品，並仔細清洗手上的油脂。</p>

### 1.2.2 China

安全消息 (請仔細閱讀)

符號	涉及安全的重要過程
危險： 	<p>如果不遵循這些安裝指南進行操作，可能會導致重傷，甚至死亡。</p> <p>可能引發安全問題的信息由警告符號（如左圖所示）來表示。</p> <p>為了確保人身安全，在執行前面帶有此符號的操作之前，請先閱讀下面的安全消息。</p> <p>為了確保人身安全，除非另有規定，否則在執行維修過程前，始終應斷開電源。</p>
小心： 	<p>此設備為靜電敏感設備。如果暴露在靜電電流下，可能會損壞設備。</p> <p>可能引發靜電安全問題的信息由警告符號（如左圖所示）來表示。</p> <p>為了防止設備或介質受損，在執行前面帶有此符號的操作之前，請先閱讀下面的安全消息。</p> <p>為了防止設備或介質受損，請在處理電路板和打印頭部件中或附近的電纜時，遵守所有規定的靜電放電 (ESD) 過程。</p> <p>為了防止設備或介質受損，請始終佩戴適當的個人接地設備（例如，已接地避免出現潛在損壞的高質量腕帶）。</p> <p>為了防止設備或介質受損，除非另有規定，否則在執行任何維修過程前，始終應將色帶和證卡與打印機分離。</p> <p>為了防止設備或介質受損，在操作打印機前，請取下手指和手上的珠寶飾物，並將手上的油漬和污漬徹底清洗乾淨。</p>
	<p>僅適用於海拔2000m 以下地區安全使用</p> <p>Use only at altitudes not more than 2000m above sea level.</p>
	<p>僅適用於非熱帶氣候條件下安全使用</p> <p>Use only in non-tropical conditions.</p>

符号	涉及安全的重要过程
	<p>环境保护 (中国-RoHS)</p> <p>环保使用期是基于本产品用于办公环境。</p> <p>Environmental Protection Use Period is based on the product being used in an office environment.</p>

### 1.3 Technical Specifications

Term	Function
Print Method	Dye Sublimation / Resin Thermal Transfer
Print resolution	300 dpi (11.8 dots/mm); continuous tone
Colors	Up to 16.7 million colors / 256 shades per pixel
Print Ribbon Options	<ul style="list-style-type: none"> <li>• Full-color with resin black and overlay panel, YMCKO*, 250 prints</li> <li>• Full-color half-panel with resin black and overlay panel, YMCKO*, 350 prints</li> <li>• Full-color with two resin black panels and overlay panel, YMCKOK*, 200 prints</li> <li>• Full-color with fluorescing, two resin black panels and overlay panel, YMCFKO*, 200 prints</li> <li>• Full-color with fluorescing, two resin black panels and overlay panel, YMCFKOK*, 175 prints</li> <li>• Resin black and overlay panel, KO*, 500 prints</li> <li>• Dye-sublimation black and overlay print, BO*, 500 prints</li> <li>• Resin black (standard and premium), 1000 prints</li> <li>• Resin green, blue, red, white, silver and gold, 1000 prints</li> <li>• Rewrite technology – No ribbon is required</li> </ul> <p>* Indicates the ribbon type and the number of ribbon panels printed where Y=Yellow, M=Magenta, C=Cyan, K=Resin Black, O=Overlay, F=Fluorescing Resin</p>
Print Speed	<ul style="list-style-type: none"> <li>• 7 seconds per card (K*)</li> <li>• 12 seconds per card (KO*)</li> <li>• 24 seconds per card (YMCKO*)</li> <li>• 31 seconds per card (YMCKOK*)</li> <li>• Print speed indicates an approximate batch print speed and is measured from the time a card feeds into the printer to the time it ejects from the printer.</li> <li>• Print speeds do not include encoding time or the time needed for the PC to process the image.</li> <li>• Process time is dependent on the size of the file, the CPU, amount of RAM and the amount of available resources at the time of the print.</li> </ul> <p>* Indicates the ribbon type and the number of ribbon panels printed where Y=Yellow, M=Magenta, C=Cyan, K=Resin Black, O=Overlay, F=Fluorescing Resin</p>
Card Size and Types Supported	<ul style="list-style-type: none"> <li>• CR-80 (3.375"L x 2.125"W / 85.6mmL x 54mmW)</li> <li>• CR-79 (3.313"L x 2.063"W / 84.1mmL x 52.4mmW)</li> </ul>

Term	Function
Accepted Standard Card Sizes	<ul style="list-style-type: none"> <li>CR-80 edge-to-edge (3.36"L x 2.11"W / 85.3mmL x 53.7mmW)</li> <li>CR-79 (3.3"L x 2.04"W / 83.8mmL x 51.8mmW)</li> </ul>
Accepted Card Thickness	.009" - .040" / 9 mil – 40 mil / .229mm – 1.016mm
Accepted Card Types	PVC or polyester cards with polished PVC finish; monochrome resin required for 100% polyester cards; optical memory cards with PVC finish; rewrite
Input Hopper Card Capacity	<b>Single hopper:</b> 100 cards (.030" / .762mm) <b>Dual hopper:</b> 200 cards (.030" / .762 mm)
Output Hopper Card Capacity	100 cards (.030" / .762mm)
Reject Hopper Card Capacity	100 cards (.030" / .762mm)
Card Cleaning	Card cleaning roller integrated into the ribbon cartridge. A new cleaning roller is included with each ribbon cartridge.
Printer Memory	32MB RAM
Operating Systems	Windows® XP / Vista™ (32 bit & 64 bit) / Server 2003 & 2008 / Windows® 7 (32 & 64 bit) / Windows® 8 (32 & 64 bit) / Linux®
Interface	USB 2.0 and Ethernet with internal print server
Operating Temperature	65 degrees to 80 degrees F / 18 degrees to 27 degrees C
Humidity	20-80% non-condensing
Weight	Single-Sided: 8 lbs. / 3.63 Kg; Dual-Sided: 10 lbs. / 4.54 Kg
Agency Listings	<b>Safety:</b> UL 60950-1, CSA C22.2 (60950-1), and CE; EMC; FCC Class A, CRC c1374, CE (EN 55022 Class A, EN 55024), CCC, BSMI, KCC
Supply Voltage	100-240 VAC, 1.6 A
Supply Frequency	50 Hz / 60 Hz
Warranty	Printer – Two years; Printhead – Two years, unlimited pass with UltraCard™
Encoding Options Supported	125kHz (HID Prox) reader 13.56 MHz (iCLASS, MIFARE, ISO 14443 A/B, ISO 15693) read/write encoder Contact Smart Card Encoder reads from and writes to all ISO7816 1/2/3/4 memory and microprocessor smart cards (T=0, T=1) as well as synchronous cards ISO Magnetic Stripe Encoding, dual high- and low-coercivity, Tracks 1,2 and 3
Options	Single Wire Ethernet and USB 2.0 Interface for inline printing and encoding <ul style="list-style-type: none"> <li>Single wire Ethernet encoding is only available for iCLASS and Contact Smart Card encoding)</li> <li>Dual-Sided Printing Module – Upgradable</li> <li>Dual Input Card Hopper – Upgradable (DTC4000)</li> <li>Same-Side Input / Output Card Hopper – Upgradable (DTC4000)</li> <li>Smart Card Encoding (contact / contactless) – Upgradable</li> <li>Magnetic Stripe Encoding – Upgradable</li> <li>Printer Cleaning Kit</li> </ul>
Software	Swift ID™ Embedded Badging Application, FARGO Workbench Diagnosis Utility
Display	Graphical Display

## 1.4 Functional Specifications

This card printer utilizes two different, yet closely related printing technologies to achieve its remarkable direct-to-card print quality for dye-sublimation and resin thermal transfer.

### 1.4.1 Printer Components: Print Ribbons

The Card Printer utilizes both dye-sublimation and/or resin thermal transfer methods to print images directly onto blank cards. Because the dye-sublimation and the resin thermal transfer print methods each provide their own unique benefits, print ribbons are available in resin-only, dye-sublimation-only and combination dye-sublimation/resin versions.

To make it easier to remember which Print Ribbons are which, a letter code has been developed to indicate the type of Ribbon panels found on each Ribbon. This letter code is as follows:

= Dye-Sublimation Yellow Panel

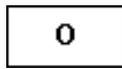

= Dye-Sublimation Magenta Panel

= Dye-Sublimation Cyan Panel

= Resin Black Panel (Premium unless otherwise stated)

= Clear Protective Overlay Panel

= Fluorescing Panel

### 1.4.1.1 Ribbon Types and Print Count

The following table includes the ribbon types and typical print count for each printer model.

Ribbon	DTC4500E
YMCKO – Full Color/Resin Black/Overlay	250
YMCKO Half Panel – Full Color (1/2)/Resin Black/Overlay	350
YMCFKO - Full Color/UV Fluorescing/Resin Black/Overlay	500
YMCKK - Full Color/2 Resin Black	500
YMCKOK - Full Color/2 Resin Black/Overlay	200
YMCFKOK - Full Color/UV Fluorescing/2 Resin Black/Overlay	400
K – Standard Resin	1000
K – Premium Resin	1000
Colored Resin	1000
KO - Premium Black Resin/Overlay	500
BO - Dye-Sub Black/Overlay	500
None – Rewritable	Supported

### 1.4.1.2 Printer Components: Blank Cards

Type	Description
Card Size	The Card Printer accepts standard CR-79 and CR-80 size cards.
Card Surface	<p>Suitable cards must have a polished PVC surface free of fingerprints, dust or any other types of embedded contaminants. In addition, cards must have a completely smooth, level surface in order for the printer to achieve consistent color coverage. Certain types of proximity cards have an uneven surface that inhibit consistent color transfer.</p> <ul style="list-style-type: none"> <li>• Certain types of smart card chips are raised slightly above the cards surface, which also results in poor color transfer.</li> </ul>
UltraCard™ Brand Cards	<p>The UltraCard product line, available exclusively as part of HID Global's FARGO brand card issuance solutions, has a long standing reputation among dealers and end-users for consistent quality in construction.</p> <ul style="list-style-type: none"> <li>• In addition to blank stock, the UltraCard line is available in a variety of configurations for magnetic stripe, custom holograms and other additional anti-counterfeiting feature</li> <li>• UltraCard™ Premium is the preferred card for Direct-to-Card (DTC®) applications that require a higher quality card. The UltraCard Premium's composite material construction provides for maximum durability, flexibility and card life, with optimal resolution print quality for lamination and fluorescent panel Ribbon printing applications.</li> <li>• UltraCard™ PVC cards are medium-durability cards for a glossy, photo quality finish. These cards are manufactured to ensure clean, scratch-free cards for high-quality prints and extended Printhead life.</li> </ul>

## 2 Setup and Installation Procedures

---

This section describes the setup and installation for the DTC4500e Card Printer.

- Choosing a good location
- Follow these guidelines:
- Place the unit in a location with adequate air circulation to prevent internal heat buildup.
- Use the printer's dimensions as a guideline for the minimum clearances to the unit.  
**Note:** Allow for adequate clearance in front of the unit to accommodate the unit with its covers open.
- Do not install unit near heat sources such as radiators or air ducts or in a place subject to direct sunlight, excessive dust, mechanical vibration or shock.

### 2.1 About Moisture Condensation

If the unit is brought directly from a cold to a warm location or is placed in a very damp room, moisture may condense inside the unit. Print quality may be degraded.

Leave the unit unplugged in a warm, dry room for several hours before using to evaporate any moisture.

**Caution:** For safety purposes, Ethernet is not intended for a direct connection outside of the building.

### 2.2 Unpacking and Inspection

While unpacking your printer, inspect the carton to ensure that no damage has occurred during shipping. Make sure that all supplied accessories are included with your unit.

Check that the following items are included:

- Power Supply
- US/EU Power Cable
- USB cable (2.0)
- Software Installation CD
- Card Printer User Guide
- Warranty Statement, Compliancy Document

## 2.3 Print Ribbon Cartridge Installation

FARGO card printers require highly specialized supplies to function properly.

- The FARGO DTC4500e Card Printer uses a one-piece, disposable ribbon cartridge.
- To maximize printer durability, reliability and printed card quality, you must use only FARGO-certified supplies.
- Your FARGO warranty is void, where not prohibited by law, if you use supplies other than FARGO-certified supplies.
- Printer cleaning is recommended with each ribbon change to ensure quality printed cards.
- Resin-only print ribbons consist of a continuous roll of a single resin color. No protective overlay panel (O) is provided because resin images do not require the protection of an overlay.

Step	Procedure
1	Insert the print ribbon cartridge into the printer.
2	Close the front cover.

## 2.4 Placement of Blank Cards into the Input Card Hopper

The FARGO DTC4500E Card Printer is capable of printing single feed cards and multiple feed cards (batch mode). To print a single feed card, remove all cards from the input card hopper, leave its door closed and place a card in the single feed card slot (which can be used repeatedly).

Step	Procedure
1	<p>Load the cards with the print side down and (if applicable) the magnetic strip up and towards the front of the printer.</p>  <p><b>Caution:</b> Do not run the cards with a contaminated, dull or uneven surface through the Printer.</p> <ul style="list-style-type: none"> <li>• Printing onto such cards may lead to poor print quality and can greatly reduce the life of the printhead.</li> <li>• Card types include PVC or PVC finish.</li> <li>• Cards eject into the output hopper or reject hopper.</li> <li>• Each input hopper holds 100 cards.</li> <li>• Certain types of smart card chips are raised slightly above the cards surface, which may result in poor color transfer. Design the card with white space surrounding the chip.</li> <li>• To print using single feed, remove all cards from the input card hopper, leave its door closed. Place a card in the single feed card slot (which can be used repeatedly).</li> </ul>
2	Open the input card hopper door.
3	Press the card hopper load lever down until the card tray locks into place.
4	<p>Load up to 100 cards into the single hopper or 200 cards into the dual hopper with the print side down.</p> <p>If using cards with a magnetic stripe, the magnetic stripe should be loaded with the stripe up and to the front of the Printer.</p>
5	Close the input card hopper door to release the lever to the printing position.

## 2.5 Card Size Selection

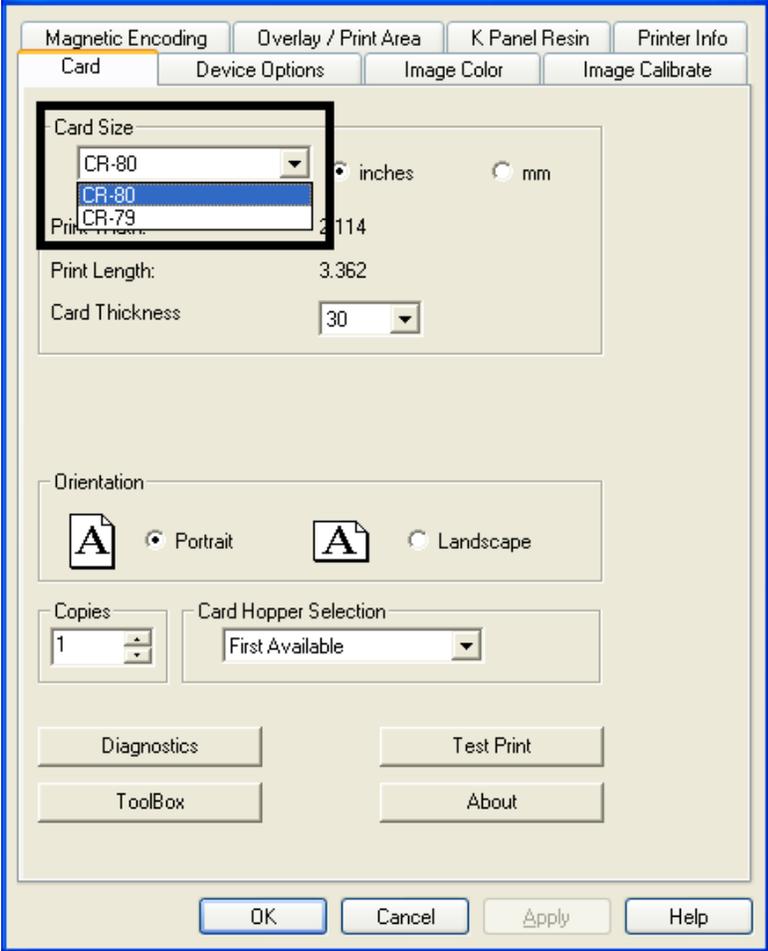

The printer uses standard size CR-70 and CR-80 cards.

Follow this procedure in the printer and in the printer driver to setup the card size.

Step	Procedure
1	<p data-bbox="370 443 841 470">Open the front door and locate the slide bar.</p> 

Step	Procedure
2	<p data-bbox="370 300 959 327">If using the CR-79 card, push the slide bar to the LEFT.</p>  <p data-bbox="748 894 1182 1045">Push LEFT for CR79 card size</p>

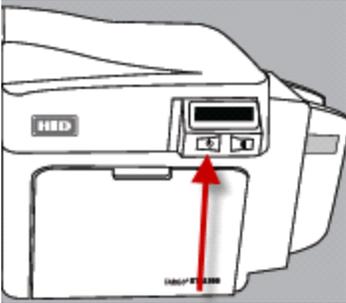

Step	Procedure
3	<p data-bbox="370 300 1455 331">If using the CR-80 card, push the slide bar to the RIGHT.</p>  <p data-bbox="548 961 938 1161">Push RIGHT for CR80 card size</p>

Step	Procedure
4	<p data-bbox="370 300 974 331">From <b>Printing Preferences</b>, select the correct card size.</p>  <p data-bbox="375 342 1143 1293">The screenshot shows the 'Printing Preferences' dialog box for the HID DTC4500e Card Printer. The 'Card' tab is selected. The 'Card Size' dropdown menu is open, showing three options: 'CR-80', 'CR-80', and 'CR-79'. The first 'CR-80' option is highlighted. Below the dropdown, there are radio buttons for 'inches' (selected) and 'mm'. The 'Print Length' is set to 3.362, and the 'Card Thickness' is set to 30. The 'Orientation' section has radio buttons for 'Portrait' (selected) and 'Landscape'. The 'Copies' section has a spinner box set to 1. The 'Card Hopper Selection' dropdown is set to 'First Available'. At the bottom, there are buttons for 'Diagnostics', 'Test Print', 'ToolBox', and 'About'. The 'OK', 'Cancel', 'Apply', and 'Help' buttons are at the very bottom.</p>

## 2.6 Printer Power

To connect power to the printer, follow this procedure.

**Note:** Do not connect the printer's USB cable until prompted during the printer driver installation.

Step	Procedure
1	Plug the AC adapter power cable into the back of the printer  
2	Plug the wall power cable into the AC power adapter.
3	Plug the wall power cable into a standard 100-240VAC power wall outlet.
4	Press the printer's power button to power on the printer.    <b>Note:</b> The printer will power down during the 'sleep time' but will automatically power up when a print job is sent.

### 3 Print Driver Installation

---

This section describes the printer driver installation requirements and standard procedures. Requirements are listed below. The DTC4500E Print Driver supports the following:

- Windows Vista 32 bit w/SP2
- Windows Vista 64 bit w/SP2
- Windows XP 32 bit w/SP3
- Windows Server 2003 (R1) 32 bit
- Windows Server 2008 (R1) 32 bit w/SP2
- Windows Server 2008 (R1) 64 bit w/SP2
- Windows Server 2008 R2
- Windows 7 32 bit & 64 bit
- Windows 8 32 bit & 64 bit
- Linux OS (Ubuntu 7.10, Red Hat Enterprise Desktop 5, Fedora Core 7 & 8, openSUSE 10.3, open NOVELL SUSE 10.) Contact HID/FARGO Technical Support for the driver.
- For more information on supported operating systems, visit Support at the HID Global website.

### 3.1 Driver Installation Instructions

Start the installation process by inserting the Driver CD into the computer; then, follow the Installaware Wizard screen prompts.

- Select “Install the Printer Driver” to start the driver installation.
- Select the FARGO Workbench Utility Program to install the Diagnostic program.
- Select **Swift ID™** to install the Swift ID (Embedded Badging Application software) and follow the Installaware Wizard on-screen prompts.
  - All versions of Windows require Administrator rights.
- From the **Printer & Faxes**, select **Printing Preferences** to setup the printer driver after it has been installed.
- Use the drop down arrows to select the correct options for each printing preference.
- Check **Enable Swift ID over a USB connection**: to use Swift ID via a USB connection.
  - When this box is checked, the Ethernet connection (if applicable) to the printer will not be operational.
  - If this selection is not accessible, this is because the HID EEM Driver that Swift ID uses to connect via a USB connection has not been installed.
  - This driver can be found on the installation CD or it can be downloaded from the HID Global support page.
  - The easiest method for enabling Swift ID is to un-install the printer and its components and reinstall the printer with Swift ID selected.

### 3.2 Swift ID Installation Instructions

Here are the related definitions for the Swift ID installation instructions.

- **Swift ID:** This is a ‘built-in badging’ application that enables Users to create simple ID badges without having to install any additional software.
 

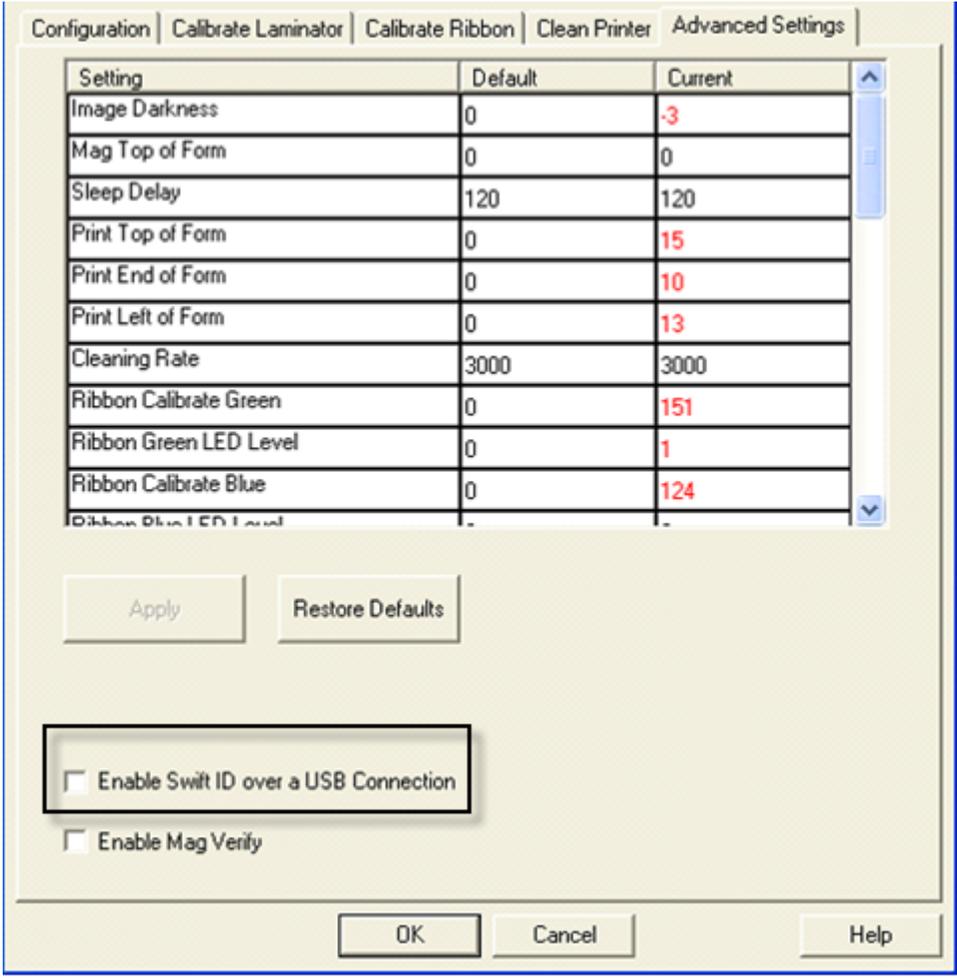

**Note:** This application is only intended for use between one printer and one PC. The application cannot select between printers, and only one printer per PC can access Swift ID.
- **HID EEM Driver:** This Driver is used by Swift ID to communicate with the PC when connected via a USB cable.
 

**Note:** EEM is the acronym for ‘ETHERNET Emulation Module’.

- **EEM Device Flag (Enable Swift ID over a USB connection):** Check this item to utilize Swift ID via a USB connection.
  - Note:** When this box is checked, the Ethernet connection (if applicable) on the printer is disabled.
  - If this flag or selection is not accessible, it means the HID EEM Driver (that Swift ID uses to connect via a USB connection) has not been installed.
    - Note:** This Driver can be found on the installation CD or it can be downloaded from the HID Global support page.

**3.2.1 Enable Swift ID**

To enable Swift ID, follow this procedure.

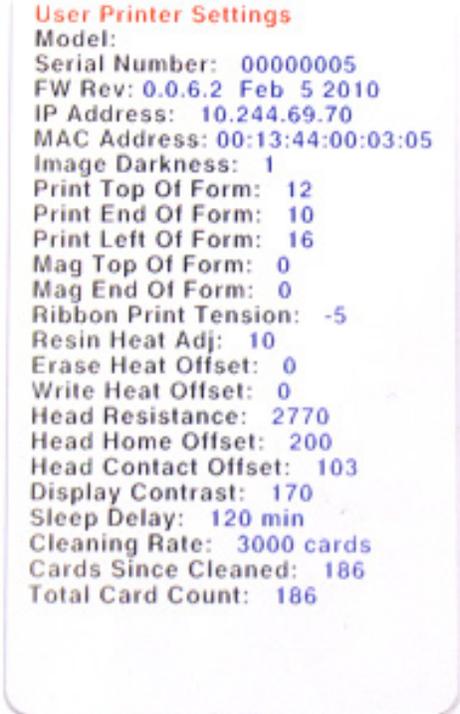

Step	Procedure																																				
1	Uninstall the printer driver and its components.																																				
2	Reinstall the printer driver and its components using the designated installation procedure.																																				
3	Select the connection type for the Swift ID application: USB or ETHERNET.  <table border="1" data-bbox="527 835 1356 1312"> <thead> <tr> <th>Setting</th> <th>Default</th> <th>Current</th> </tr> </thead> <tbody> <tr> <td>Image Darkness</td> <td>0</td> <td>-3</td> </tr> <tr> <td>Mag Top of Form</td> <td>0</td> <td>0</td> </tr> <tr> <td>Sleep Delay</td> <td>120</td> <td>120</td> </tr> <tr> <td>Print Top of Form</td> <td>0</td> <td>15</td> </tr> <tr> <td>Print End of Form</td> <td>0</td> <td>10</td> </tr> <tr> <td>Print Left of Form</td> <td>0</td> <td>13</td> </tr> <tr> <td>Cleaning Rate</td> <td>3000</td> <td>3000</td> </tr> <tr> <td>Ribbon Calibrate Green</td> <td>0</td> <td>151</td> </tr> <tr> <td>Ribbon Green LED Level</td> <td>0</td> <td>1</td> </tr> <tr> <td>Ribbon Calibrate Blue</td> <td>0</td> <td>124</td> </tr> <tr> <td>Ribbon Blue LED Level</td> <td>-</td> <td>-</td> </tr> </tbody> </table>	Setting	Default	Current	Image Darkness	0	-3	Mag Top of Form	0	0	Sleep Delay	120	120	Print Top of Form	0	15	Print End of Form	0	10	Print Left of Form	0	13	Cleaning Rate	3000	3000	Ribbon Calibrate Green	0	151	Ribbon Green LED Level	0	1	Ribbon Calibrate Blue	0	124	Ribbon Blue LED Level	-	-
Setting	Default	Current																																			
Image Darkness	0	-3

Ribbon Calibrate Blue	0	124																																			
Ribbon Blue LED Level	-	-																																			

### 3.2.2 Install Swift ID

### 3.2.3 Network Printer Installation

Perform this procedure to install a printer on a network.

Step	Procedure
1	Connect the printer to the network.
2	<p>Find the IP Address by navigating through the printer display.</p>  <p>The screenshot shows the following settings:</p> <ul style="list-style-type: none"> <li><b>User Printer Settings</b></li> <li>Model:</li> <li>Serial Number: 00000005</li> <li>FW Rev: 0.0.6.2 Feb 5 2010</li> <li>IP Address: 10.244.69.70</li> <li>MAC Address: 00:13:44:00:03:05</li> <li>Image Darkness: 1</li> <li>Print Top Of Form: 12</li> <li>Print End Of Form: 10</li> <li>Print Left Of Form: 16</li> <li>Mag Top Of Form: 0</li> <li>Mag End Of Form: 0</li> <li>Ribbon Print Tension: -5</li> <li>Resin Heat Adj: 10</li> <li>Erase Heat Offset: 0</li> <li>Write Heat Offset: 0</li> <li>Head Resistance: 2770</li> <li>Head Home Offset: 200</li> <li>Head Contact Offset: 103</li> <li>Display Contrast: 170</li> <li>Sleep Delay: 120 min</li> <li>Cleaning Rate: 3000 cards</li> <li>Cards Since Cleaned: 186</li> <li>Total Card Count: 186</li> </ul>

Step	Procedure
3	<p>Open up a Web Browser.</p> <p>Type the IP Address followed by /SwiftID.html to access the Swift ID badging application.</p> <ul style="list-style-type: none"> <li>• For example: 10.244.69.70/SwiftID.html</li> <li>• The Getting Started with Swift ID... page displays.</li> </ul> 

### 3.2.4 Printer Connected Via USB Connection

Perform this procedure on the initial setup of a printer when connecting Swift ID via USB.

**Note:** This application is not intended for use with multiple printers.

To start using Swift ID via a USB connection with a printer that has already been installed on the PC, select Option 1 or 2 and complete the procedure.

Step	Procedure
1	<p>Follow the on-screen instructions during the Printer Driver installation process to install all the required components to access Swift ID via a USB connection.</p> <p><b>Note:</b> The HID EEM Driver installs. A shortcut appears on the desktop, which allows you to easily launch the application.</p> 

#### 3.2.4.1 Option 1

Step	Procedure
1	Uninstall the printer driver, reinstall the printer driver and check the <b>Enable Swift ID over a USB connection</b> check box.

#### 3.2.4.2 Option 2

Step	Procedure
1	Install the HID EEM Driver from the driver CD or download the HID EEM Driver installer file from the support page
2	Run the installation file.
3	<p>When the installation is complete, check the <b>Enable Swift ID over a USB Connection</b> check box in the Advanced section of the printer driver.</p> <p><b>Note:</b> When this flag is checked, a new printer instance appears and the old printer instance is no longer valid.</p>

### 3.2.5 Uninstalling Swift ID

For a printer installed on a network, no steps are needed to remove any of the components of Swift ID.

For a printer that is connected via a USB connection, deselect (uncheck) the **Enable Swift ID over a USB Connection** check box in the advanced section of the printer driver and then run the uninstall HID EEM Driver setup.

**Note:** When this flag is disabled, a new printer instance appears and the old printer instance is no longer valid.

### 3.2.6 Additional Swift ID Rules

The following apply when (a) the HID EEM driver for Swift ID is installed on the PC for a printer and (b) a second printer with the EEM flag enabled is connected to the PC:

- A Printer instance appears for the second printer; however, a second shortcut for Swift ID does not appear.  
**Note:** Swift ID is not intended to operate with two printers.
- If both printers are connected to the PC, the printer that is first powered on is tied into Swift ID.

The following apply when (a) the EEM driver is not installed on the PC and (b) another printer (same model) with EEM disabled is connected to the PC.

- A printer driver instance appears.
- The User is not asked to enable EEM for the printer.
- The HID EEM driver is not installed for the printer on the PC.
- The EEM flag in the printer driver is 'grayed out' so that the User cannot change this state.

## 4 Printer Preferences

This section provides an overview of the Printing Preferences tab.

### 4.1 Card tab

Click on the **Card** tab to display the window.

**Card**    Device Options    Image Color

Magnetic Encoding    Overlay / Print Area    K Panel Resin

Card Size

CR-80    inches    mm

Print Width: 2.114

Print Length: 3.362

Card Thickness: 30

Orientation

Portrait    Landscape

Copies: 1

Card Hopper Selection: First Available

Diagnostics    Test Print

ToolBox    About

Select either **CR-80 (ISO ID-1)** or **CR-79** sized cards for Card Size.

Click **inches** or **mm** to choose the desired unit of measurement.

Select Print **Print Width** or **Print Length** for the desired Card Dimensions.

Select **Card Thickness (mil)** as required for that dimension.

Select **Portrait** for vertical orientation and **Landscape** for horizontal orientation.

Select the number of copies.

Select the correct Card Hopper.

Click on **Diagnostics** to bring up the Workbench Printer Utility.

Click on the **Test Print** button to send a self-test print to the Printer.

Click on the **About** button to bring up the Copyright, Version, and Date Code information for Printer Driver Software.

Click on the **Toolbox** button to bring up the Configuration, Calibrate Ribbon, Clean Printer, and Advanced Settings.

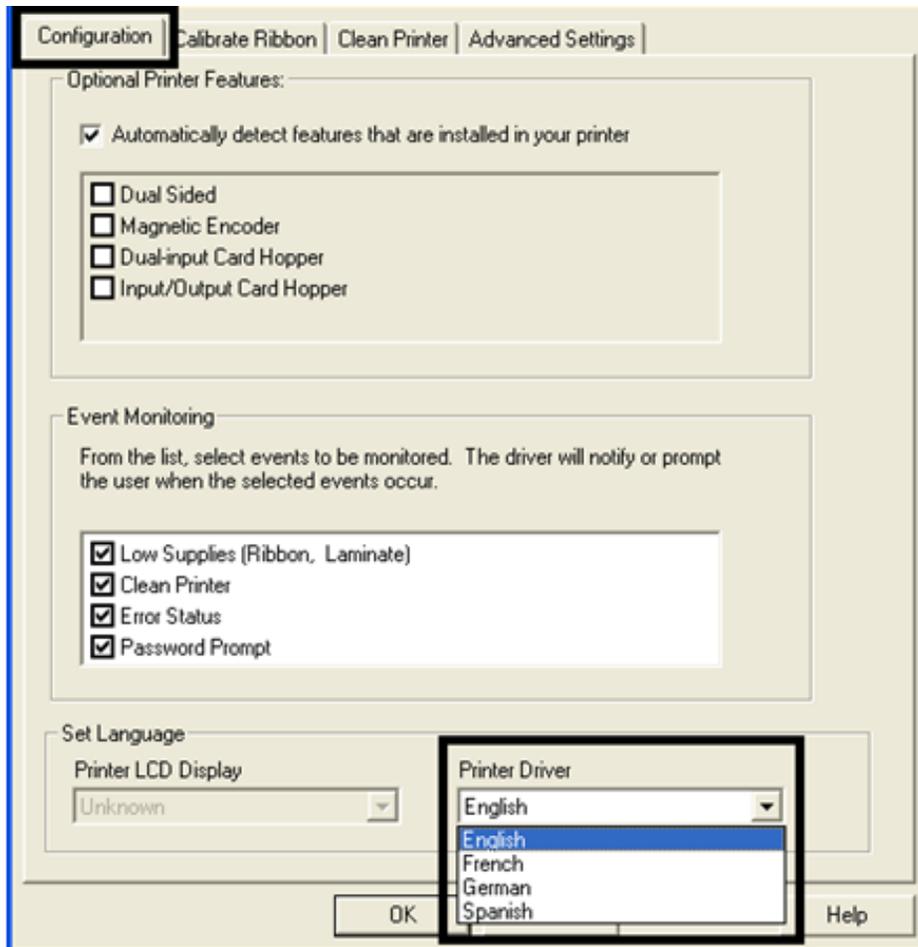

**Note:** See below for more information on the Diagnostics and Toolbox.

### 4.1.1 Configuration tab

This option is used to show the currently installed Optional Printer Features, Event Monitoring, to set the Printer Driver language and Printer Display language.

#### 4.1.1.1 Set Language

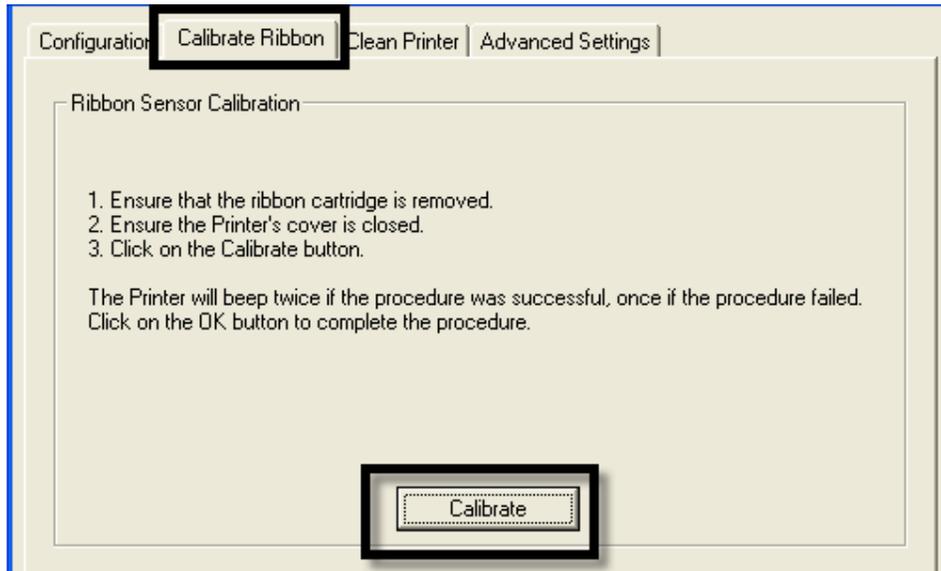

To switch between languages, select the preferred language, select **OK** twice and then open the driver in the preferred language.

**4.1.2 Calibrate Ribbon tab**

The **Calibrate** button sends the Calibrate Ribbon command to printer. Follow the procedure below to setup the printer.

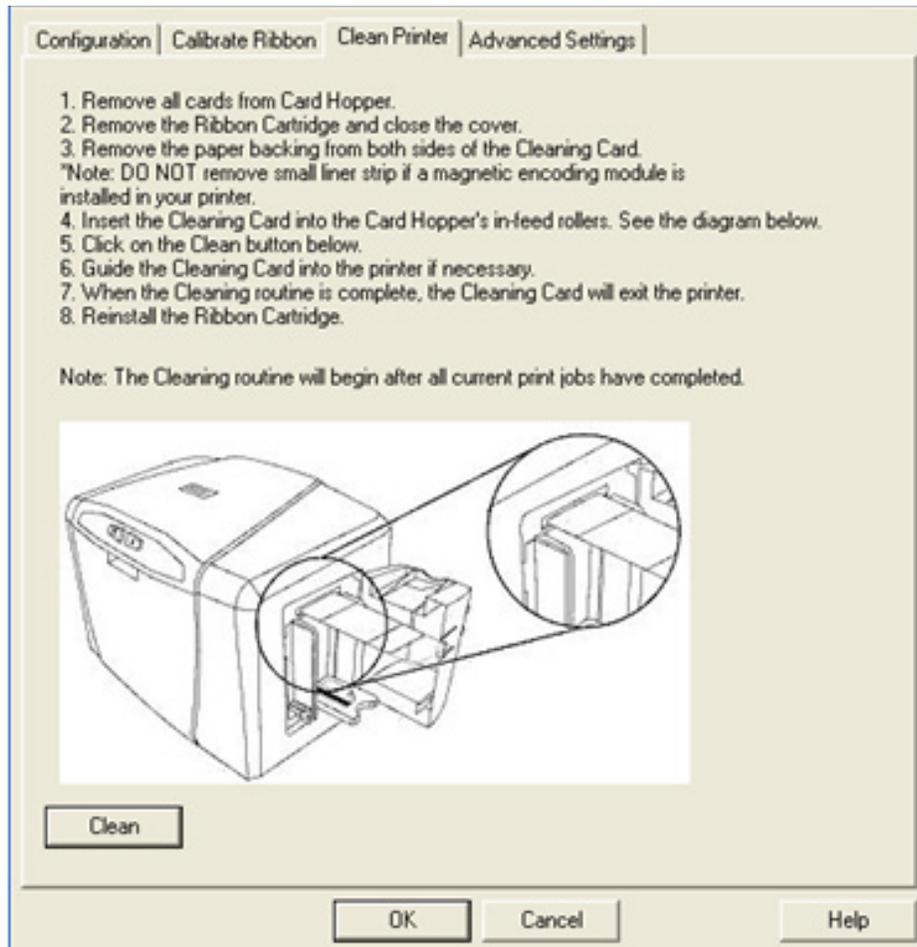

Step	Procedure
1	Remove the ribbon cartridge from the printer.
2	Close the printer's front cover.
3	Select the <b>Calibrate Ribbon</b> tab.
4	Click <b>Calibrate</b> .

### 4.1.3 Clean Printer tab

The button for the **Clean Printer** tab is described below.

- **Clean Button:** Launches the cleaning routine. Follow the instruction on the page for setting up the Printer.

**4.1.3.1 Safety Messages (Review Carefully)**

Symbol	Critical Instructions for Safety purposes
<p><b>Danger:</b></p> 	<p><b>Failure to follow these installation guidelines can result in death or serious injury.</b></p> <p>Information that raises potential safety issues is indicated by a warning symbol (as shown to the left).</p> <ul style="list-style-type: none"> <li>• <b>To prevent personal injury</b>, refer to all safety messages before performing an operation preceded by this symbol.</li> <li>• <b>To prevent personal injury</b>, always remove the power cord prior to performing repair procedures, unless otherwise specified.</li> <li>• <b>To prevent personal injury</b>, make sure only qualified personnel perform these procedures.</li> </ul>
<p><b>Caution:</b></p> 	<p><b>This device is electrostatically sensitive. It may be damaged if exposed to static electricity discharges.</b></p> <p>Information that raises potential electrostatic safety issues is indicated by a warning symbol (as shown to the left).</p> <ul style="list-style-type: none"> <li>• <b>To prevent equipment or media damage</b>, refer to the following safety messages before performing an operation preceded by this symbol.</li> <li>• <b>To prevent equipment or media damage</b>, observe all established Electrostatic Discharge (ESD) procedures while handling cables in or near the Circuit Board and Printhead Assemblies.</li> <li>• <b>To prevent equipment or media damage</b>, always wear an appropriate personal grounding device (e.g., a high quality wrist strap grounded to avoid potential damage).</li> <li>• <b>To prevent equipment or media damage</b>, always remove the Ribbon and Cards from the Printer before making any repairs, unless otherwise specified.</li> <li>• <b>To prevent equipment or media damage</b>, take jewelry off of fingers and hands, as well as thoroughly clean hands to remove oil and debris before working on the Printer.</li> </ul>

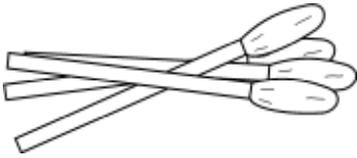

**4.1.3.2 Cleaning Kit**

**Caution:** As with any electronic device, internal components of the Printer, such as the Printhead, may be damaged if exposed to static electrical discharges. To avoid potential damage, always wear an appropriate personal grounding device, such as a wrist strap (with integral resistor) connected to an ESD ground.

**Supplies (Included with the Cleaning Kit)**

This Cleaning Kit provides you with the specialized cleaning supplies and the required cleaning procedures for you to maintain your card printer. The following cleaning procedures will require less than 10 minutes.

Description	Supplies (pictured)
<p><b>Four (4) Printhead Cleaning Swabs</b> are pre-moistened with 99.99% isopropyl alcohol for cleaning your printer's printhead.</p>	
<p>Three (3) Alcohol Cards are premoistened with 99.99% isopropyl alcohol for cleaning your printer's platen, and card feed rollers.</p>	
<p><b>Ten (10) Cleaning Cards</b> are provided with adhesive backing for cleaning your printer's platen and card feed rollers.</p>	

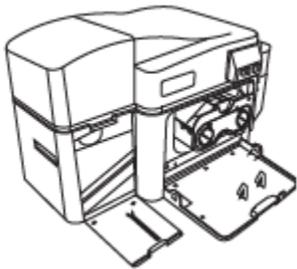

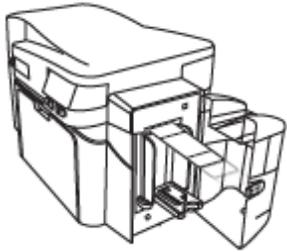

#### 4.1.3.3 Printhead Cleaning

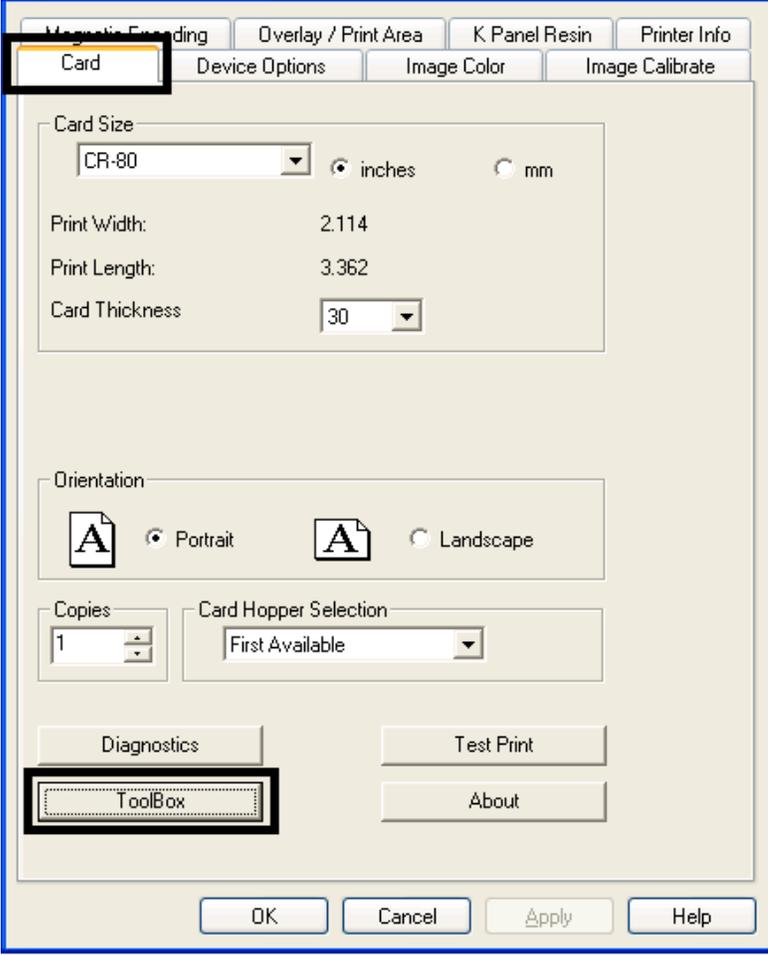

Step	Procedure
1	 <p><b>Caution:</b> Turn <b>Off</b> the printer and unplug the power cord from the printer.</p>
2	Remove the ribbon cartridge.
3	Open the <b>Printhead Cleaning Swabs</b> . Break it to moisten the tip.
4	<p>Swab the tip back and forth across the top of the printhead. Allow to dry thoroughly before sending a print job.</p> 

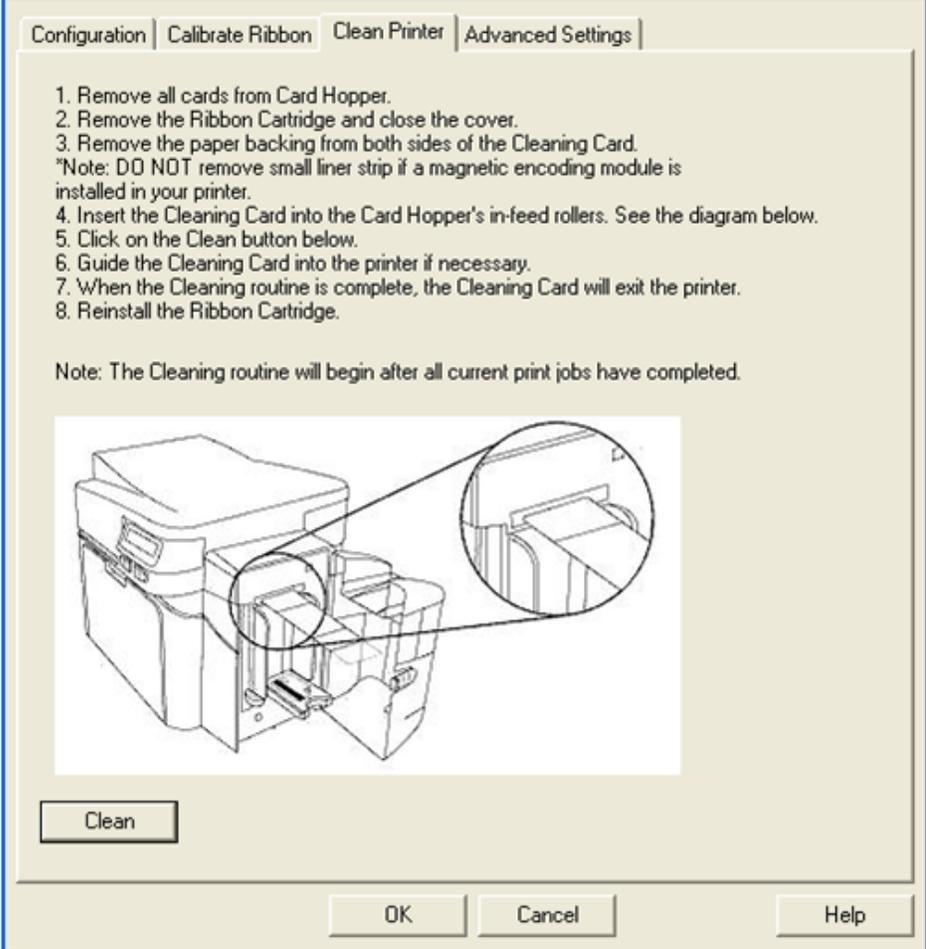

**4.1.3.4 Cleaning the Platen and the Card Feed Rollers**

Perform this procedure approximately every **1000 prints** to maintain a consistent print quality.

**Note:** The card feed rollers move the card throughout the print process. Rollers should be kept clean to prevent card jams and card contamination. This cleaning process will ultimately lead to better print quality and extended printhead life.

Step	Procedure
1	<p>Open the printer's front cover, remove the print ribbon and close the front cover. Remove all the cards from the printer's input card hopper.</p> 
2	<p>Use the cleaning card from the cleaning kit and remove the adhesive backing from both sides of the card.</p> <ul style="list-style-type: none"> <li>• If your printer has a magnetic encoder installed, be sure to leave the small liner strip on top of the cleaning card in place.</li> <li>• This small strip is needed to protect the magnetic head from the adhesives on the cleaning card.</li> </ul> 
3	<p>Insert the cleaning card into the single feed card slot until the card stops. If your printer is equipped with a magnetic encoder, you must insert the cleaning card with the printed side up and with the small liner strip towards the front of the printer.</p> 

Step	Procedure
4	From your computer, open the printer driver and select <b>Printing Preferences</b> .
5	Click <b>Toolbox</b> . 

Step	Procedure
6	<p>Select the <b>Clean Printer</b> tab.</p>  <ol style="list-style-type: none"> <li>1. Remove all cards from Card Hopper.</li> <li>2. Remove the Ribbon Cartridge and close the cover.</li> <li>3. Remove the paper backing from both sides of the Cleaning Card. *Note: DO NOT remove small liner strip if a magnetic encoding module is installed in your printer.</li> <li>4. Insert the Cleaning Card into the Card Hopper's in-feed rollers. See the diagram below.</li> <li>5. Click on the Clean button below.</li> <li>6. Guide the Cleaning Card into the printer if necessary.</li> <li>7. When the Cleaning routine is complete, the Cleaning Card will exit the printer.</li> <li>8. Reinstall the Ribbon Cartridge.</li> </ol> <p>Note: The Cleaning routine will begin after all current print jobs have completed.</p>
7	<p>Click <b>Clean</b>.</p> <ul style="list-style-type: none"> <li>• The printer pulls in the cleaning card. The printer performs the automated cleaning procedure.</li> <li>• This procedure is designed to thoroughly clean the platen and the card feed rollers inside the printer.</li> </ul>

**4.1.3.5 Cleaning the Printer's Exterior**

Clean the printer only with a microfiber cloth. Do not drip water into the printer. Dry thoroughly before printing.

**Note:** The printer has a durable casing that should retain its luster and appearance for many years.

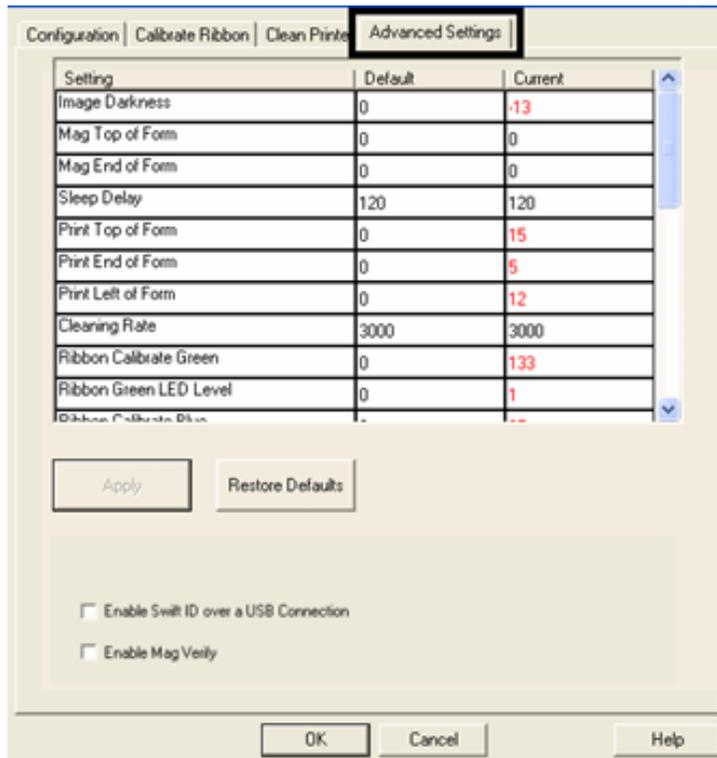

#### 4.1.4 Advanced Settings tab

Use the **Advanced Settings** tab for adjusting the internal Printer settings, which are customized for every Printer at the factory and saved directly within the Printer's memory.

**Note:** You can select the Restore Defaults to restore the internal default settings.

These change values for Firmware settings.

- **Setting Column:** Displays label for setting.
- **Default Column:** Displays default value for setting.
- **Current Column:** Displays current value for setting.
- Change the value by clicking on the value to activate spin control or type.
- **Apply Button:** Applies changed values.
- **Restore Defaults Button:** Restores default values.
- **Enable Swift ID if using a USB connection.**

Example:

Setting	Default	Current
Image Darkness	0	-14

Setting	Option
<b>Image Darkness</b>	<p>Use this option to set the overall darkness of the printed image by increasing or decreasing the amount of heat (used by the Printhead when printing).</p>  <p><b>Caution:</b> If the value is set too high, the Ribbon may jam or even break.</p>
<b>Mag Top of Form</b>	<p>Use this option to shift the starting point where the Printer begins to encode the magnetic track data on the card's Magnetic Stripe.</p>  <p><b>Caution:</b> If the negative value is set too high, the Printer may start encoding before the Magnetic Stripe reaches the encoding head.</p> <ul style="list-style-type: none"> <li>• Maximum adjustment range is +/- 80.</li> <li>• Each increment equals .01".</li> </ul>
<b>Sleep Delay</b>	<p>The Sleep Time setting adjusts the number of minutes of inactivity before the Printer enters a low power sleep state.</p>
<b>Print Top of Form</b>	<p>Use this option to adjust the length-wise or horizontal position of the printed image on the card (so it appears to be centered).</p>  <p><b>Caution:</b> If the negative value is set too high, the print ribbon may break.</p>
<b>Print End of Form</b>	<p>Use this option to reduce or increase the overall printable area; this is done in order to optimize edge to edge printing toward the trailing edge of the card.</p> <ul style="list-style-type: none"> <li>• Maximum adjustment range is +/- 127.</li> <li>• Each increment equals .01".</li> </ul>
<b>Print Left of Form</b>	<p>Use this option to adjust the vertical position of the printed image on the card; so it appears centered.</p> <ul style="list-style-type: none"> <li>• Maximum Adjustment Range is +/- 127.</li> <li>• Each increment equals .01".</li> </ul>
<b>Cleaning Rate</b>	<p>Use this option to adjust the number of cards printed before the Printer displays a message indicating cleaning is needed.</p> <ul style="list-style-type: none"> <li>• The default value is 3000 cards.</li> </ul>
<b>Ribbon Calibrate Green</b>	<p>This is a calibration driven value and should not be adjusted. <b>Note:</b> This is factory set and should not be changed unless directed by a technician.</p>
<b>Ribbon Green LED Level</b>	<p>This is a calibration driven value and should not be adjusted. <b>Note:</b> This is factory set and should not be changed unless directed by a technician.</p>
<b>Ribbon Calibrate Blue</b>	<p>This is a calibration driven value and should not be adjusted. <b>Note:</b> This is factory set and should not be changed unless directed by a technician.</p>

Setting	Option
<b>Ribbon Blue LED Level</b>	This is a calibration driven value and should not be adjusted. <b>Note:</b> This is factory set and should not be changed unless directed by a technician.
<b>Ribbon Print Tension</b>	Use the Ribbon Tension option to increase or decreases the amount of tension (drag) on the Ribbon during printing.
<b>Flipper Home Offset</b>	This is a calibration driven value and should not be adjusted. If the flipper unit is replaced and has not been calibrated this value may need to be adjusted. <b>Note:</b> This is factory set and should not be changed unless directed by a technician.
<b>Flipper Lam Height Offset</b>	This is a calibration driven value and should not be adjusted. If the flipper unit is replaced and has not been calibrated this value may need to be adjusted. <b>Note:</b> This is factory set and should not be changed unless directed by a technician.
<b>Mag HI-Co Voltage Offset</b>	This option changes the voltage going to the magnetic head. <b>Note:</b> This is factory set and should not be changed unless directed by a technician.
<b>Mag Lo-Co Voltage Offset</b>	This option changes the voltage going the magnetic head. <b>Note:</b> This is factory set and should not be changed unless directed by a technician.
<b>OLED Contrast (display contrast)</b>	Use this option to increase or decrease the contrast of the printer OLED (if applicable).
<b>Resin Heat Adjust</b>	Use this adjustment for Black resin text and barcodes if they appear faded or too light/dark. <ul style="list-style-type: none"> <li>Maximum Adjustment Range is +/- 100.</li> </ul> <b>Note:</b> This control can be helpful for fine-tuning the transfer of resin text and bar codes.
<b>Head Resistance</b>	This is factory set. If the main board or the printhead is replaced then adjust this number. Locate the Printhead Setting Number on the bottom of the printhead. The number reads R=XXXX.
<b>Head Home Offset</b>	This is a calibration driven value and should not be adjusted. If the printhead assembly is replaced then this value may need to be adjusted. <b>Note:</b> This is factory set and should not be changed unless directed by a technician.
<b>Head Contact Offset</b>	This is a calibration driven value and should not be adjusted. If the Printhead assembly is replaced then this value may need to be adjusted. <b>Note:</b> This is factory set and should not be changed unless directed by a technician.

Setting	Option
<p><b>Erase Heat Offset</b></p>	<p>Adjust the Erase temperature for the rewriteable cards as needed.</p> <ul style="list-style-type: none"> <li>• Increase the <b>Current Setting</b> to cause more heat to be used in the erasing process.</li> </ul> <p><b>OR</b></p> <ul style="list-style-type: none"> <li>• Decrease the <b>Current Setting</b> to cause less heat to be used in the erasing process.</li> </ul> <p><b>Note: Erase Heat Offset</b> provides user ability to control the Printhead heat level when the Erase Operation is performed. Appropriate heat levels should be applied for the proper erase process. This setting should be adjusted for proper erasure.</p>
<p><b>Write Heat Offset</b></p>	<p>Adjust the Write temperature for the rewriteable cards as needed.</p> <ul style="list-style-type: none"> <li>• Increase the <b>Current Setting</b> to cause more heat to be used in the printing process of a rewritable card.</li> </ul> <p><b>OR</b></p> <ul style="list-style-type: none"> <li>• Decrease the <b>Current Setting</b> to cause less heat to be used in the printing process of a rewritable card.</li> </ul> <p><b>Note: Write Heat Offset</b> provides user ability to control the Printhead heat level when the Write Operation is performed. Appropriate heat levels should be applied for the proper writing process.</p>
<p><b>Enable Swift ID over USB connection</b></p>	<p>Check this item to utilize Swift ID via a USB connection. When this box is checked the Ethernet connection (if applicable) on the printer will not be operational.</p> <ul style="list-style-type: none"> <li>• If the USB selection is not be accessible, the HID EEM driver that Swift ID uses to connect via a USB connection has not been installed.</li> <li>• This driver can be found on the installation CD or it can be down loaded from the HID Global support page.</li> <li>• The easiest method for enabling Swift ID is to uninstall the printer driver and its components and go through the installation procedure.</li> </ul> <p>Select the desired connection type for the Swift ID application: USB or ETHERNET.</p>

## 4.2 Device Options tab

Click on the Device Options tab to bring up the window.

The screenshot shows the 'Device Options' dialog box with the following settings and callouts:

- Supplies:**
  - Automatically detect the installed Ribbon for every print job.
  - Ribbon Type: YMCKO - Full Color/Resin Black/Overlay
- Dual Sided:**
  - Print Both Sides
  - Split 1 Set of Ribbon Panels
  - Print Back Image on Front of Card
  - Print Back Side Only
- Options:**
  - Rotate Front 180 Degrees
  - Rotate Back 180 Degrees
  - Disable Printing
  - Invert F-panel Image
  - Write Only

Callout boxes provide the following instructions:

- Click Detect Supplies at Print Time to verify that the Ribbon type selected matches the Ribbon installed in the Printer. The Printer Driver will change the Ribbon type to the correct setting. The dialog indicates either the current setting has changed or the current Ribbon type is correct.
- Select this option to rotate the image on the card's front by 180 degrees (when printed).
- Select this option to rotate the image on the card's back by 180 degrees (when printed).
- Use this option to disable the printer's capabilities.

The screenshot shows the 'Device Options' tab in the HID DTC4500e Card Printer software. The interface is divided into three main sections: 'Supplies', 'Dual Sided', and 'Options'. A callout box on the right provides detailed instructions for several settings.

**Supplies:**

- Automatically detect the installed Ribbon for every print job.
- Ribbon Type: **YMCKO - Full Color/Resin Black/Overlay**

**Dual Sided:**

- Print Both Sides
- Split 1 Set of Ribbon Panels
- Print Back Image on Front of Card
- Print Back Side Only

**Options:**

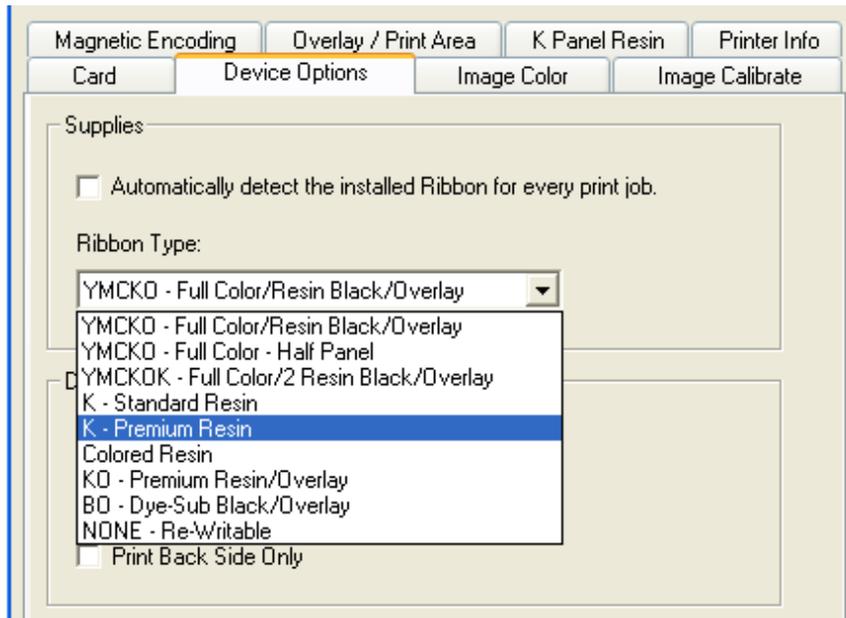

- Rotate Front 180 Degrees
- Rotate Back 180 Degrees
- Disable Printing
- Invert F-panel Image
- Write Only

**Callout Box Instructions:**

- Use the Ribbon Type option to select Print Ribbons.
- Use this option to automatically print on the card's front and back sides.
- Select this option to automatically print full-color on the card's front and resin black on the card's back (using either full-color YMCKO or YMCKOK Print Ribbons).
- Select this option to:
  - Print the first page of a two-page file on the card's backside.
  - OR**
  - Print the resin black on the Smartcard's chip-side. (**Note:** The 2nd page of the file will be printed on the card's frontside.)
- Use this option to print only onto the card's backside.

Buttons at the bottom: **OK**, **Cancel**, **Apply**, **Help**

## 4.2.1 Ribbon Type dropdown

### 4.2.1.1 Write Only

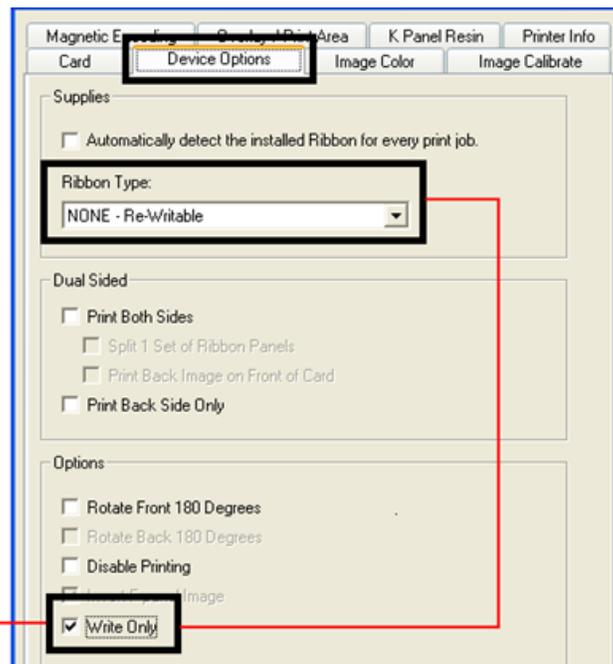

You can use this option for the re-writable cards. Select the **Write Only** option.

- The default setup is for the Printer to first erase the previously-printed card; then write the new information on the card.

- If you are printing to a new card, select **NONE - Re-Writable** to speed up the process. The full card is erased and printed. There is no option to select specific areas to erase.

- To print/erase a certain section, use the **Overlay/Print Area** tab in the Driver. Select the specific area in the same manner as the print job with the Color Ribbon.

- To erase many cards, use the **Fargo Workbench Re-Writable Card Eraser** option. This option does not print. It will only erase.

**Caution:** No Ribbon is used with these cards. Do not load a Ribbon into the Printer when using this process. Printing on the Re-Writable card with a Ribbon will ruin the card.

#### 4.2.2 Selecting the Fluorescent Panel Ribbon Type

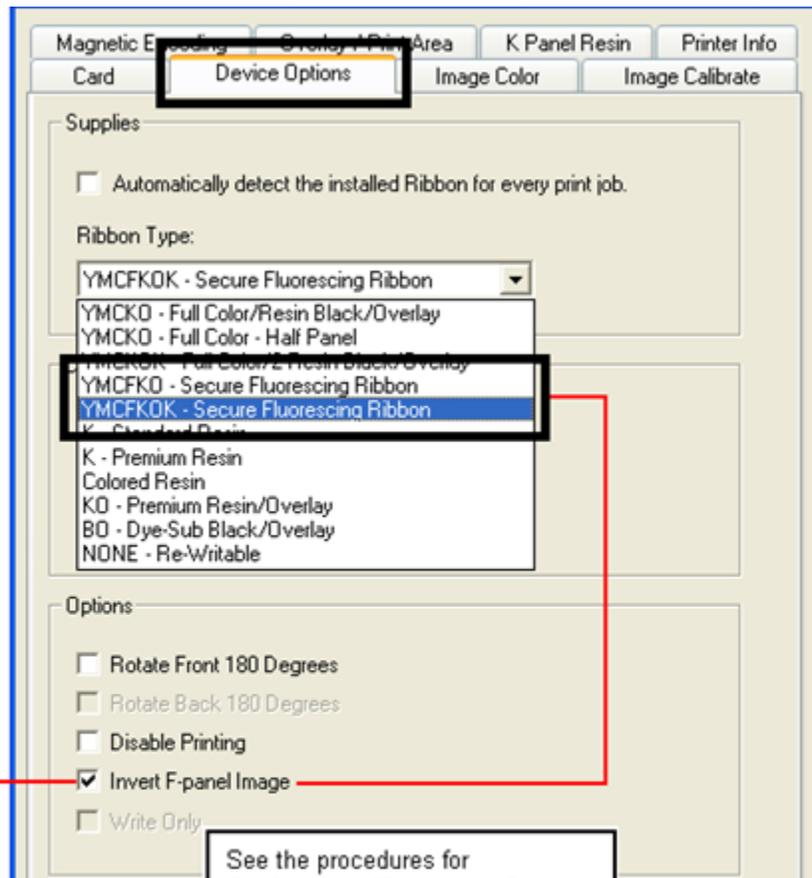

The YMCFKO/YMCFKOK Ribbon is an economical way to add a fully customizable, incremental level of security to your photo identification cards.

- **Process:** This process allows you to configure the data that is printed with the fluorescent panel of an YMCFKO/YMCFKOK Ribbon.  
**Note:** Any software program may be used to print the special florescent panel of the Ribbon to a card once the Driver and Workbench are set up correctly.
- **Ribbons:** These Ribbons contain a yellow (**Y**), magenta (**M**), cyan (**C**), and resin black (**K**) panels to create a full color over-the-edge printing identification card. In addition, the Ribbon contains a dye-based fluorescing panel (**F**) which will allow you to print a standard or one-to-one personalized fluorescing image that is completely invisible until exposed to ultraviolet light.

#### 4.2.3 Creating a Custom Fluorescent Image (using the YMCFKO Ribbon)

There are three (3) methods used to accomplish the creation of a custom fluorescent image when using the YMCFKO Ribbon.

- **First Method:** The first method uses the FARGO Workbench Printer Utility to create a static image that will be applied automatically to each card sent to the Printer. Refer to the **Help file** for the **FARGO Workbench Utility Program and User Guide**.
- **Second Method:** The second method (described below) allows the creation of the fluorescent panel image directly from the badge application software.  
**Note:** You can now print a unique fluorescent image, such as the card holder's picture on each card.
- **Third Method:** The third method is described in the **Asure ID Software User Guide**.

Check Invert F-Panel Image to create a negative of the fluorescent image. See below.

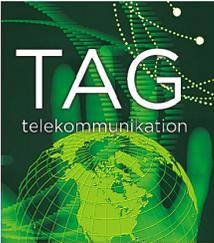

- Refers to the ability to cause light or white areas of the image to fluoresce and for dark colors to remain dark on the printed card when exposed to a UV light.
- This was requested because the fluorescent dye color is bright when black light is applied to it.

By default, the dark areas of the image will fluoresce on the card, and the lighter or white areas will have no dye applied.

See the procedures for Configuration Fluorescent Data (F-Panel for YMCFKO Ribbon) using the Workbench and Configuring Fluorescent Data (F-Panel for YMCFK Ribbon) using the Application for more details.

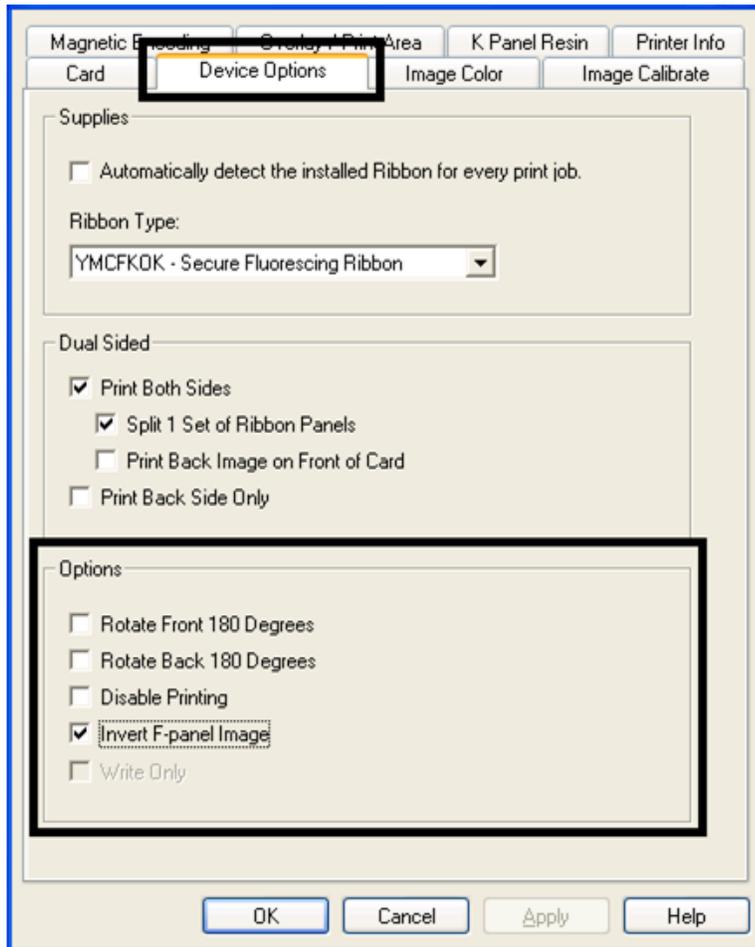

#### 4.2.4 Configuring Fluorescent Data (F-Panel for YMCFKO Ribbon) using the Application

This process creates a fluorescent image on your card using a simple text string command in your badge application.

Step	Procedure
1	<b>Creating Fluorescent Text:</b> Create a new text box in your badge application.
2	<p>Type the <b>TEXT</b> that you want to appear as fluorescent and put a <b>~T</b> before the start of the text with no space after the <b>~T</b>. The text will start on the card where the <b>~T</b> begins.</p> <div style="display: flex; align-items: center; gap: 20px;"> <div data-bbox="500 667 634 697">~Ic:\globe.bmp</div>  </div> <div style="display: flex; align-items: center; gap: 20px; margin-top: 10px;"> <div data-bbox="542 842 634 888">Valid until MAY 2006</div>  </div> <div style="display: flex; align-items: center; gap: 20px; margin-top: 10px;"> <div data-bbox="506 989 578 1213">  <p>A-567-234-212223-698-R5</p> </div> <div data-bbox="792 1010 862 1276" style="writing-mode: vertical-rl; text-orientation: mixed;"> <p>~TSC06893B</p> </div> <div data-bbox="841 1010 862 1226" style="writing-mode: vertical-rl; text-orientation: mixed;"> <p>SC06893B</p> </div> </div> <div style="display: flex; align-items: center; margin-top: 10px; background-color: #008000; color: white; padding: 5px;"> <div data-bbox="526 911 727 961" style="margin-right: 20px;"> <p>Christian Sander Technical Advisor</p> </div> </div>

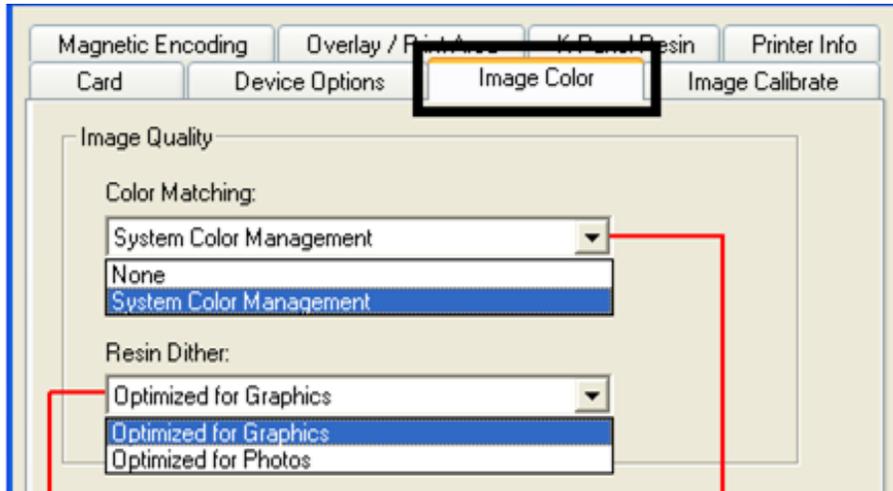

Step	Procedure
3	<p><b>Creating a Fluorescent Image:</b> In a separate drawing program, create the image that you wish to fluoresce.</p> 
4	<p>Create the <b>IMAGE</b> in the actual size that you want it to appear on the card, and save it as a Grayscale or 1 - bit bmp file on the root c:\ directory.</p> <ul style="list-style-type: none"> <li>Do not put spaces in the file name.</li> </ul>
5	<p>Create a new text box in your badge application, and type ~I followed by the address of your image. The top left of your image will start at the top left of your text box.</p>
6	<p>Set up the Printer Driver preferences. Refer to Step 8-9 below.</p>
7	<p>Printer will print the fluorescent BMP IMAGE at the ~I position on the card. Printer will print the fluorescent TEXT at the ~T position on the card. BMP Image located at c:\globe.bmp</p> 
8	<p>Set the Ribbon for YMCFKO in the Printing Preferences. <b>Note:</b> The <b>Automatically detect the installed Ribbon for every print job</b> button may also be used.</p>

Step	Procedure
9	<p>Check Invert F-Panel Image to create a negative of the fluorescent image.</p> <ul style="list-style-type: none"> <li>• This functionality causes light or white areas of the image to fluoresce and dark colors to remain dark on the printed card when exposed to a UV light.</li> <li>• This feature was requested because the fluorescent dye color is bright when black light is applied to it.</li> </ul> <p>By default, the dark areas of the image will fluoresce on the card and the lighter or white areas will have no dye applied.</p> <p><b>Note:</b> This may improve the look of the person's image if used for the Logo.</p>

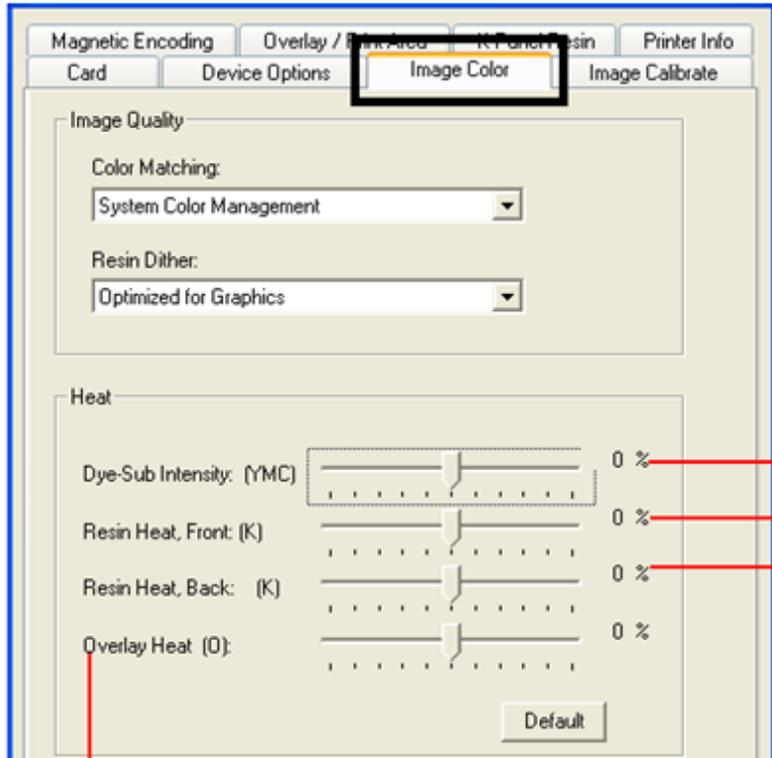

### 4.3 Image Color tab

Click on the Image Color option tab to bring up the window.

Select the appropriate dither method according to the type of image to be printed. This option affects objects printed with a resin-only Print. Select Optimized for Graphics when printing drawings and graphics (e.g., clipart, logos, etc.) with resin.  
**OR**  
 Select Optimized for Photos when printing photo quality images with resin.

Use the Color Matching dropdown menu to choose the color matching options which best fits the print job requirements. Select None for print speed versus print color or for use of third party color matching software.  
**OR**  
 Select System Color Management for Windows to make color corrections. This provides a closer match to the RGB color specifications.

Control the overall darkness and lightness of the printed image by adjusting the Dye-Sub Intensity slider.

- Move the slide to the left to cause less heat to be used in the printing process and to generate a lighter print.

**OR**

- Move the slide to the right to cause more heat to be used, thus generating a darker print. This slide only affects images printed with dye-sublimation Ribbon panels (YMC).

Use this option to control the amount of heat the Printer uses when printing with the resin black panel(s) of a full-color Ribbon or when printing with a resin-only Ribbon by adjusting the Resin Heat slide.

- Move the slide to the left to (a) cause less heat to be used in the printing process and (b) cause resin images to be lighter or less saturated.

**OR**

- Move the slide to the right to (a) cause more heat to be used or (b) cause the resin image to be darker or more saturated.

Use this option to control the amount of heat the Printer uses when printing with the Overlay Ribbon Panel.

- Move the slide to the left to cause less heat to be used while printing.

**OR**

- Move the slide to the right to cause more heat to be used.

You can use this option to control the image quality. The Sharpness, Contrast and Gamma settings are controlled here.

The color balance for yellow, magenta and cyan are adjusted with these settings.

Move the slide to the left to cause less of the particular option to be used in the printing process.  
**OR**  
Move the slide to the right to cause more of the particular option to be used.

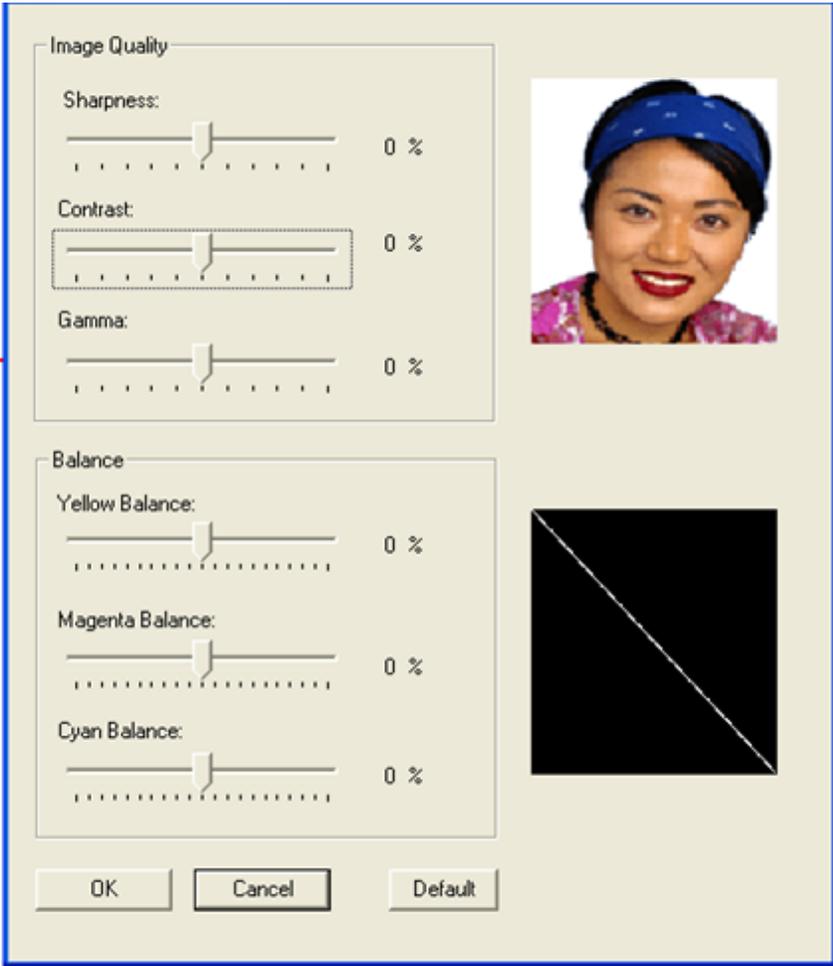

Image Quality

Sharpness: 0 %

Contrast: 0 %

Gamma: 0 %

Balance

Yellow Balance: 0 %

Magenta Balance: 0 %

Cyan Balance: 0 %

OK Cancel Default

### 4.4 Image Calibrate tab

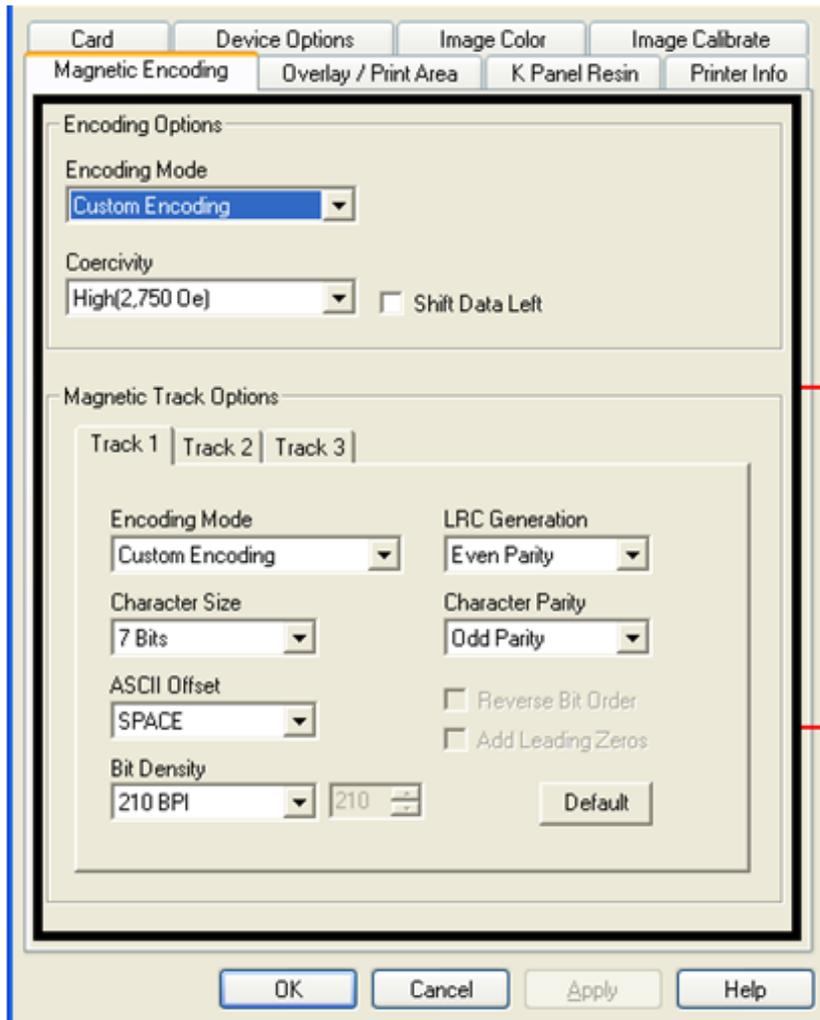

Use the Image Calibrate tab to control the position of the printable area in relation to the card.

The screenshot shows the 'Image Calibrate' tab in a software interface. The interface includes a preview window on the left showing a card with a photo and text, with directional arrows (+V, -V, +H, -H) indicating movement. To the right of the preview are two numeric input fields: 'Vertical' and 'Horizontal', both currently set to '0'. A red box highlights the 'Image Calibrate' tab label. Five callout boxes provide detailed instructions:

- Top Callout:** Use the Image Position controls to adjust the position of the overall print area to be precisely centered on a card.
- Right Callout:** Use the Calibrate tab to control the position of the printable area in relation to the card.
- Bottom-Right Callout:** Use the Vertical adjustment to move the image toward:
  - The rear of the Printer if a positive number is entered.
  - The front of the Printer if a negative number is entered.
- Bottom-Middle Callout:** Use the Horizontal adjustment to move the image toward:
  - The card output side of the Printer if a positive number is entered.
  - The card input side of the Printer if a negative number is entered.
- Bottom-Left Callout:** The maximum value for the Vertical and Horizontal adjustments is  $\pm 100$  pixels (10 pixels = about .03"/.8mm). The Vertical and Horizontal adjustment arrows point to within the Image Position window, which represents the direction that the printed image moves.

## 4.5 Magnetic Encoding Tab

Select the **Magnetic Encoding** tab to display options for controlling the Magnetic Stripe encoding process. You should use these options only if the Printer has an optional Magnetic Stripe Encoding Module installed.

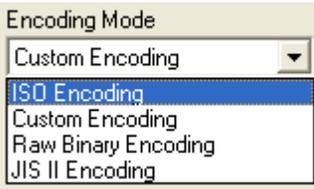

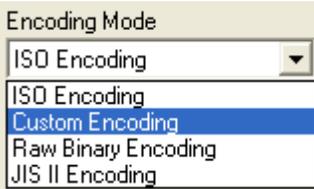

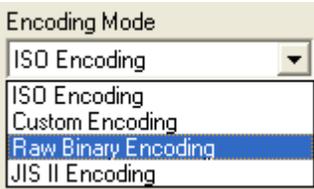

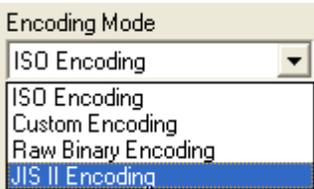

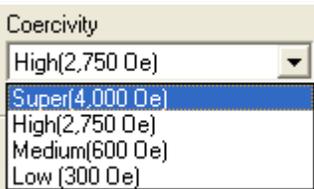

Please see the related tables and procedured below for more details on how to use the Magnetic Encoding tab window.

Use the Default button to reset defaults for the current Track tab only.

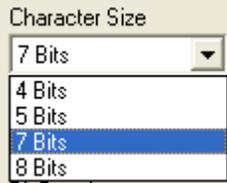

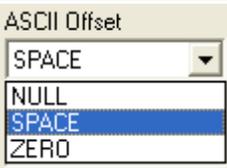

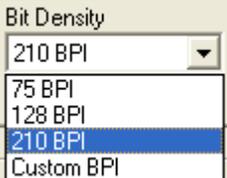

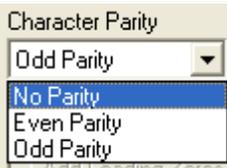

### 4.5.1 Using the Magnetic Encoding Tab – ISO Standards

You can change the encoding mode and coercivity setting or modify the ISO standards for Tracks 1, 2 and 3. This can be done by correctly modifying these Magnetic Encoding options.

Window Tab	Procedure	Procedure (continued)
	If you select <b>ISO Encoding</b> , you send down a formatted set of characters.	This selection activates the track tabs. However, all functions on the Track tabs are inactive or gray and display ISO defaults, which are the defaults listed for each track below. The <b>Shift Data Left</b> check box remains unchecked and inactive.
	If you select <b>Custom Encoding</b> , all options are active.	The <b>Default</b> is ISO Encoding. <b>Note:</b> The defaults are the same as the ISO Encoding defaults. All functions on the Magnetic Track Options tabs are active.
	If you select <b>Raw Binary Encoding</b> , you send down a raw binary string rather than a formatted set of characters.	The <b>Coercivity</b> dropdown function is active and the <b>Shift Data Left</b> checkbox is not active. All functions on the Magnetic Track Options tabs are inactive except for <b>Bit Density</b> .
	If you select <b>JIS II Encoding</b> , specific standards are used.	This selection disables all the Magnetic Track Options tabs. It also disables the Coercivity dropdown function and <b>Shift Data Left</b> checkbox option. The default Coercivity is 600 Oe.
	Select the <b>Coercivity</b> option (Oersted) that matches the card type.	High Coercivity 4000 Oersted FARGO's High Coercivity UltraCard III's are 2750 Oersted Medium Coercivity=600 Oersted Low Coercivity = 300 Oersted
	Select this option to shift the recorded magnetic data to the left-hand side of the card's Magnetic Stripe.	This is useful in situations that require cards to be readable with insert type readers.
	Select the <b>Magnetic Track Selection</b> option to specify which track is to be configured through the Magnetic Track Options.	This applies if the application being used <u>requires</u> customization of the standard ISO encoding process.

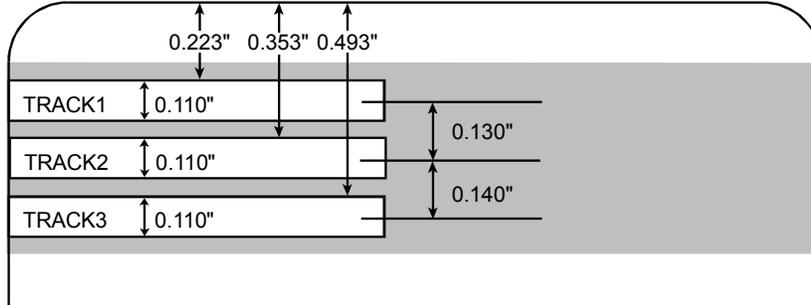

#### 4.5.2 Using the Magnetic Encoding Tab – Custom Encoding or Raw Binary Encoding Mode

You can change the Magnetic Track options for Tracks 1, 2 and 3 when using the Custom Encoding or Raw Binary Encoding Mode. These options are not available for ISO or JIS II encoding.

Window TAB	Procedure	Procedure (continued)
	Select <b>4 Bits</b> to change the bits per character to 4 BPC. <b>Note:</b> This is the default for Track 3. Select <b>5 Bits</b> to change the bits per character to 5 BPC. <b>Note:</b> This is the default for Tracks 2 and 3.	Select <b>7 Bits</b> to change the bits per character to 7 BPC. <b>Note:</b> This is the default for Track 1. Select <b>8 Bits</b> to change the bits per character to 8 BPC.
	Select <b>NULL</b> to change the ASCII Offset to NULL. Select <b>SPACE</b> to change the ASCII Offset to SPACE. <b>Note:</b> This is the default for Track 1.	Select <b>ZERO</b> to change the ASCII Offset to ZERO. <b>Note:</b> This is the default for Tracks 2 and 3.
	Select <b>75 BPI</b> to change the bits per inch to 75 BPI. <b>Note:</b> This is the default for Track 2. Select <b>128 BPI</b> to change the bits per inch to 128 BPI.	Select <b>210 BPI</b> to change the bits per inch to 210 BPI. <b>Note:</b> This is the default for Tracks 1 and 3. Select <b>Custom BPI</b> , which enables the custom BPI text box. Note: The lower limit is 75 and upper limit is 210.
	Select <b>No LRC</b> to change the LRC Generation to none. Select <b>Even Parity</b> to change the LRC Generation to Even Parity. Note: This is the default for all tracks.)	Select <b>Odd Parity</b> to change the LRC Generation to Odd Parity.
	Select <b>No Parity</b> to change the Character Parity to none. Select <b>Even Parity</b> to change the Character Parity to Even Parity.	Select <b>Odd Parity</b> to change the Character Parity to Odd Parity. Note: This is the default for all tracks.)
<input type="checkbox"/> Reverse Bit Order <input type="checkbox"/> Add Leading Zeros	<b>Reverse Bit Order</b> is used to reverse the character bits and is used for the encryption of data in specific programs	<b>Add Leading Zeros</b> is used to add a set number of leading zeros to the magnetic string in order to move the starting point of the encoded data in specific programs for encryption of data.

**4.5.2.1 Reviewing the ISO Track Locations**

The magnetic Encoding Module encodes onto tracks in accordance with an ISO 7811-2 Magnetic Stripe. For track locations, review the display below.

**4.5.3 Reviewing the Sample String**

- Track 1: ~1%JULIEANDERSON^1234567890?
- Track 2: ~2;1234567890987654321?
- Track 3: ~3;1234567890987654321?

Track	Start Sentinel	End Sentinel	Field Separator	Valid Characters	Maximum Number of Characters
Track 1	%	?	^	ASCII 32-95	78
Track 2	;	?	=	ASCII 48-63	39
Track 3	;	?	=	ASCII 48-63	106

**4.5.4 Sending the Track Information**

Magnetic track data is sent in the form of text strings from the application software to the Printer Driver.

- In order for the Printer Driver to differentiate between Magnetic Track data and the rest of the printable objects, specific characters must be added to the magnetic data to be encoded.
- These specify the data that is to be encoded, the tracks to encode and mark the start and stop of the data string. In some cases, these specific characters are automatically added to the string of track data by ID software applications.

- In most cases, the user must carefully add these characters to the string of Magnetic Track data. If these characters are not added to the track data, the text intended for the Magnetic Track will appear as printed text on the card. To avoid this, track information must be entered as described below.

Step	Procedure
1	<p>When entering track data, the ~ (tilde) character is entered first, followed by the track number (1, 2 or 3) on which the data should encode. The data to be encoded follows the track number.</p> <ul style="list-style-type: none"> <li>• The first character of this data string must be the track's specific Start Sentinel (SS) and the last character must be the specific End Sentinel (ES).</li> <li>• The characters or data in between the SS and ES can include all of the valid characters specific to each track.</li> <li>• The number of these characters, however, is limited by each track's maximum character capacity.</li> <li>• When segmenting track data, the appropriate Field Separator (FS) must be used. The table below shows the SS, ES, FS and the valid characters defined for each track.</li> </ul>

#### 4.5.4.1 Reviewing the ASCII Code and Character Table

ASCII Code	Character	ASCII Code	Character	ASCII Code	Character
32	space	56	8	80	P
33	!	57	9	81	Q
34		58	:	82	R
35	#	59	;	83	S
36	\$	60	<	84	T
37	%	61	=	85	U
38	and	62	>	86	V
39	'	63	?	87	W
40	(	64	@	88	X
41	)	65	A	89	Y
42	*	66	B	90	Z
43	+	67	C	91	[
44	'	68	D	92	\
45	-	69	E	93	]
46	.	70	F	94	^
47	/	71	G	95	_
48	0	72	H		
49	1	73	I		
50	2	74	J		
51	3	75	K		
52	4	76	L		
53	5	77	M		
54	6	78	N		
55	7	79	O		

## 4.6 Overlay / Print Area tab

This option is helpful if, for example, you would like to omit the printing or block out the overlay for a signature or printing around a card's smart chip or magnetic stripe.

Use this tab to control and customize where the Overlay (O) Panel and/or the print area appear on a card. By default, this option is set to print and overlay the entire card.

Select **For Print and Overlay** for the defined area to apply to both the printing and overlay process.  
**OR**  
 Select **For Overlay Only** for the defined area to apply only to the overlay process. In this mode, printing will still be allowed over the entire card and only the overlay will be affected.  
**OR**  
 Select **For Print Only (No Overlay)** for the defined area to apply only to the print process. In this mode, the overlay is completely disabled so it will not be applied.

The Visual Security Solutions dropdown menu list is used to enable and select which type of visual security will be used.

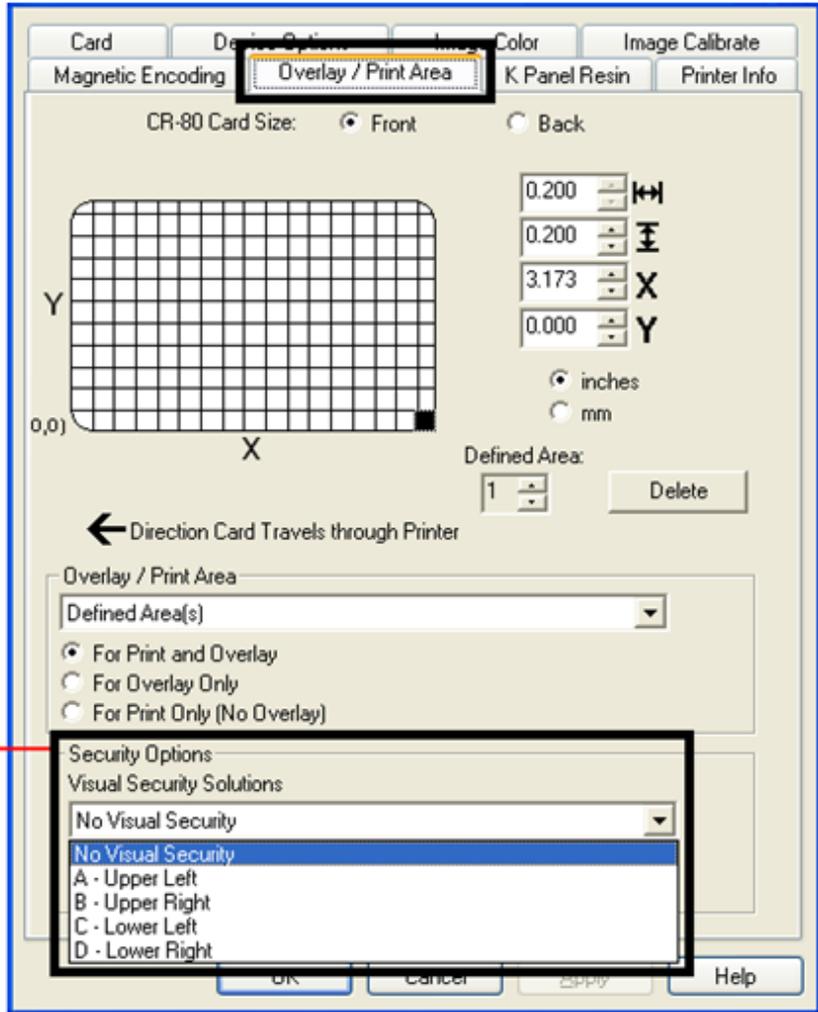

The Visual Security dropdown list is selectable only on the Front side. Visual Security is not an option for the back side.

These actions occur when one of the Visual Security locations is selected.

- The Overlay / Print Area will be disabled.
- The Security Options become selectable.

Select **Landscape** under **Orientation** on the Card tab to use the Visual Security Solutions (A to D).

Select **Portrait** under **Orientation** on the Card tab to use the Visual Security Solutions (E to H).

## 4.7 K Panel Resin tab

Use this tab to control where the resin black (K) panel of a full-color ribbon is printed.

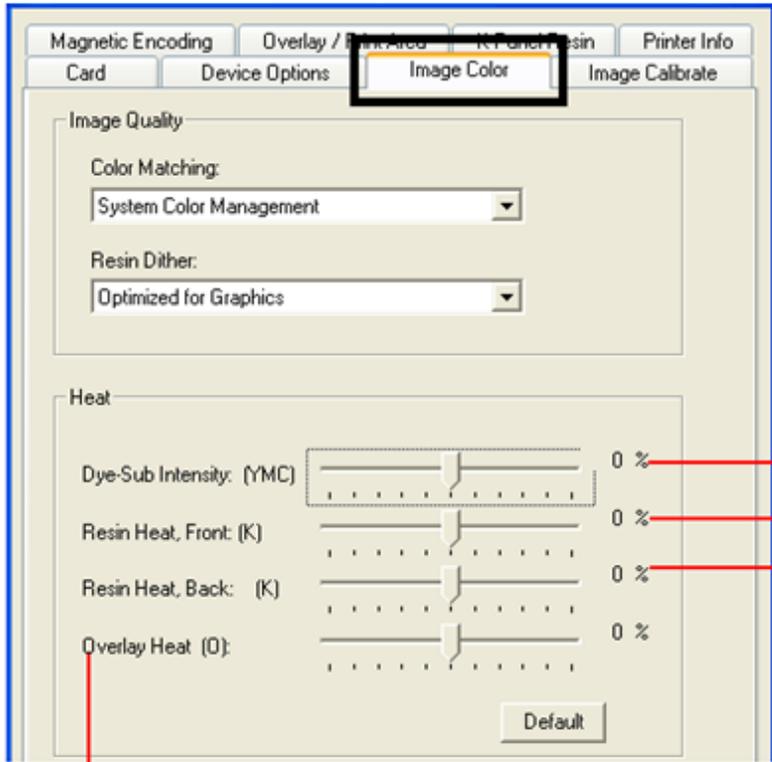

Select **Full Card** for the Printer Driver to print the resin black (K) panel for all black found within all areas of the image.

Select **Defined Area(s)** for the Printer Driver to print the resin black (K) panel for all black found only in a desired and defined area or areas.

Select **Undefined Area(s)** for the Printer Driver to print the resin black (K) panel for all black found only in the space outside the defined areas. In the card grid, black indicates the area in which the resin black (K) panel will be printed.

Select one of the three options listed under Print All Black with K Panel if the black text or bar codes are not TrueType fonts and/or are not printing with the resin black panel.

When these options are not selected, the Printer Driver will automatically print all TrueType black text and bar codes only with the Resin Black (K) Panel of the Print Ribbon.

Control the overall darkness and lightness of the printed image by adjusting the Dye-Sub Intensity slider.

- Move the slide to the left to cause less heat to be used in the printing process and to generate a lighter print.

**OR**

- Move the slide to the right to cause more heat to be used, thus generating a darker print. This slide only affects images printed with dye-sublimation Ribbon panels (YMC).

Use this option to control the amount of heat the Printer uses when printing with the resin black panel(s) of a full-color Ribbon or when printing with a resin-only Ribbon by adjusting the Resin Heat slide.

- Move the slide to the left to (a) cause less heat to be used in the printing process and (b) cause resin images to be lighter or less saturated.

**OR**

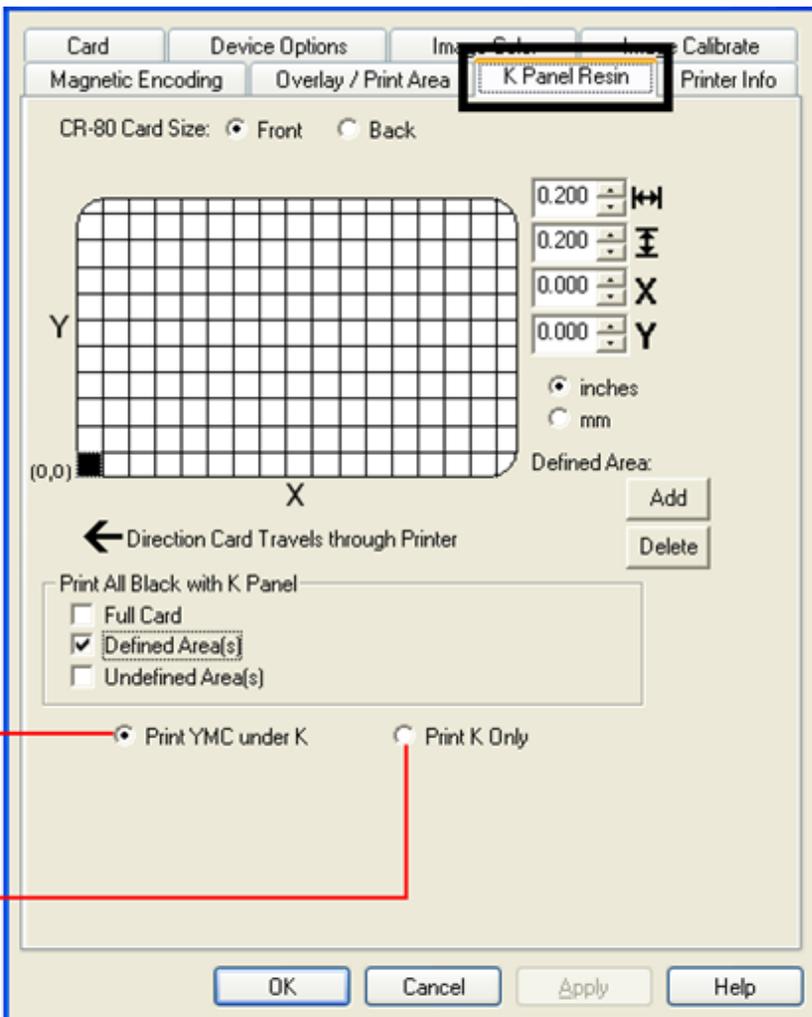

- Move the slide to the right to (a) cause more heat to be used or (b) cause the resin image to be darker or more saturated.

Use this option to control the amount of heat the Printer uses when printing with the Overlay Ribbon Panel.

- Move the slide to the left to cause less heat to be used while printing.

**OR**

- Move the slide to the right to cause more heat to be used.

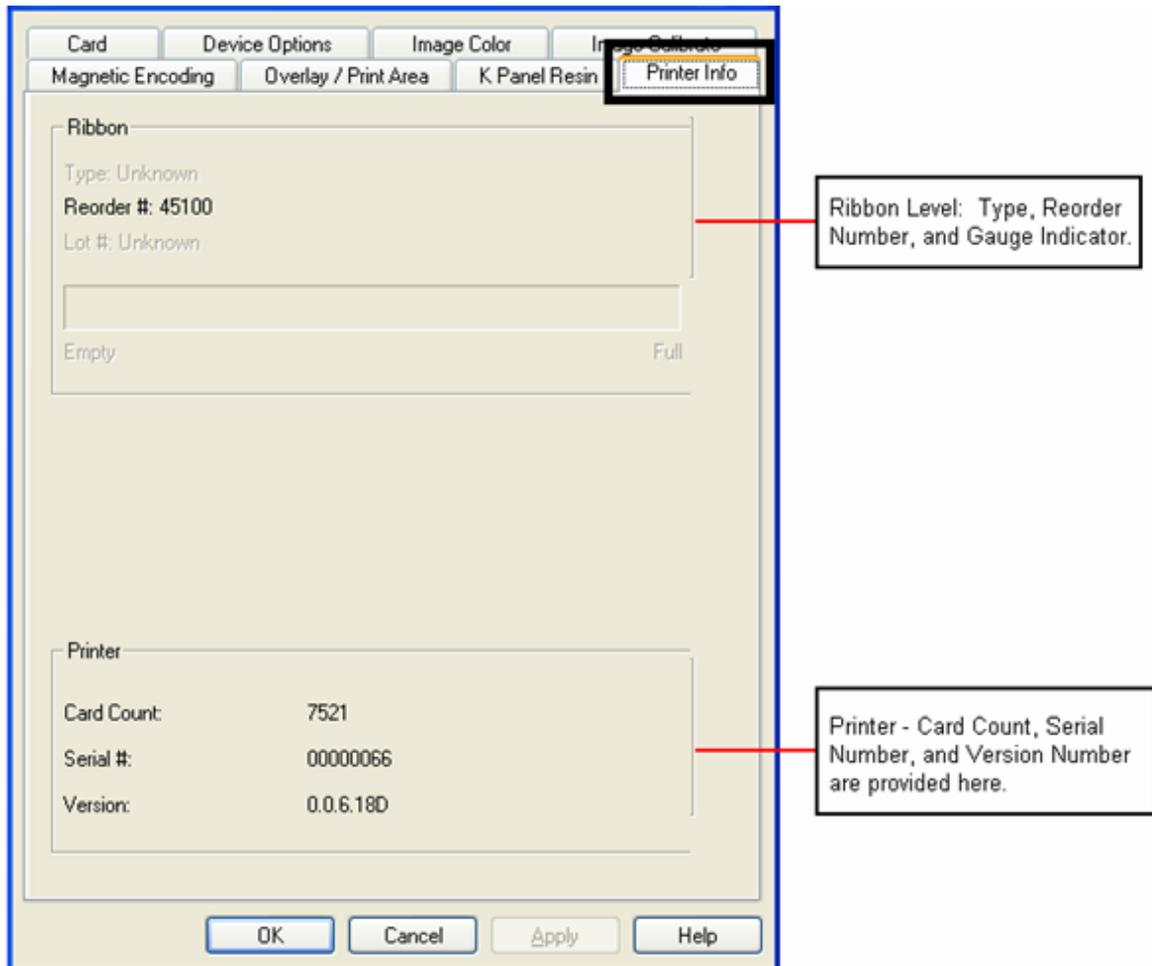

Select the **Print YMC under K** option to print all black in the designated areas with the Yellow (Y), Magenta (M) and Cyan (C) Ribbon panels directly beneath the resin black (K) panel and provide a gradual transition between the resin black text or bar codes.

Select **Print K Only** if printing resin black onto a white background to maximize the sharpness of printed text and bar codes and print all black in the designated areas with the resin black (K) panel.

### 4.8 Printer Info tab

Use the options on this tab to view information about the Ribbon, Card Count, Printer Serial #, Firmware version, and Reorder Media #'s installed in the Printer.

## 5 System Overview - Troubleshooting

### 5.1 Sequence of Operations

Knowing the sequence of the printer operation helps when troubleshooting the printer.

Step	Process
1	File information is received from the PC.
2	Printer compares the installed ribbon type stored in memory with the ribbon type command that was sent from the printer. If the ribbon type does not match, the <b>Pause</b> button (on the right) flashes.
3	The print stepper motor engages.
4	The card feed sensor detects the leading edge of the card and the headlift stepper engages to disengage the input lever.
5	The card feeds through for the alignment pass.
6	The card feed stepper motor engages to queue card for magnetic encoding (if applicable).
7	The encoded data is written to the card (if applicable).
8	The magnetic encoder verifies while the stepper reverses the card (if applicable).
9	The print ribbon drive engages (if not already at the yellow panel).
10	The print ribbon sensor looks for the yellow panel. <b>Note:</b> The print ribbon encoder detects the number of revolutions required to use an entire color panel.
11	The print stepper motor engages.
12	The card feed sensor detects the leading edge of card.
13	The print stepper motor queues card to the middle of the platen roller. All stop.
14	The print headlift motor engages to the print position.
15	The print cover sensor checks for closed state.
16	The print stepper motor engages.
17	The ribbon drive motor engages.
18	The image data is burned by the printhead until the image data is depleted. All Stop.
19	The thermistor engages the printhead cooling fan to maintain proper operating temperature.
20	The headlift motor engages to the queue position.
21	The print stepper motor engages.
22	The print ribbon drive engages.
23	After ribbon advances a few encoder clicks, assume the ribbon is free of card. All stop.
24	Repeat Steps 9 through 22 for the appropriate number of color/overlay Panels.
25	Either the card is ejected from the singled-sided printer or the card feed stepper engages to queue the card for the flipper table for the dual-sided printer.
26	All stop.

## 5.2 Troubleshooting

### 5.2.1 Printer Error Buttons

All Printers have two (2) buttons:

- ON/OFF 
- Pause 

The display message system appears as a graphical message, for example:

Step	Procedure
1	The <b>ON/OFF</b> (  ) button is blue when the printer is ON. When the printer enters the Sleep mode, the button LED is dimmed but still ON.
2	The <b>Pause</b> (  ) button illuminates blue when the printer is capable of accepting a print job and is not in an error state. This button LED will continue to stay on while the printer prints as long as there is no error. This button LED will also be dimmed when the printer goes into Sleep mode.
3	When an error occurs, the <b>Pause</b> (  ) button no longer illuminates blue but blinks red.
4	Press the <b>ON/OFF</b> (  ) button when printer is in an error state to cause the action to be cancelled. <b>Note:</b> If no other error occurs, the <b>Pause</b> button illuminates as blue.
5	Press the <b>Pause</b> (  ) button when printer is in an error state to cause the printer to retry. <b>Note:</b> The button illuminates as blue and retries the failed action.
6	When downloading an upgrade file, both buttons are blue and blink
7	If a language (other than English) is currently selected, you can press and hold the <b>Pause</b> (  ) button during the power-up sequence to change the language back to English.

### 5.2.2 Error Message Table

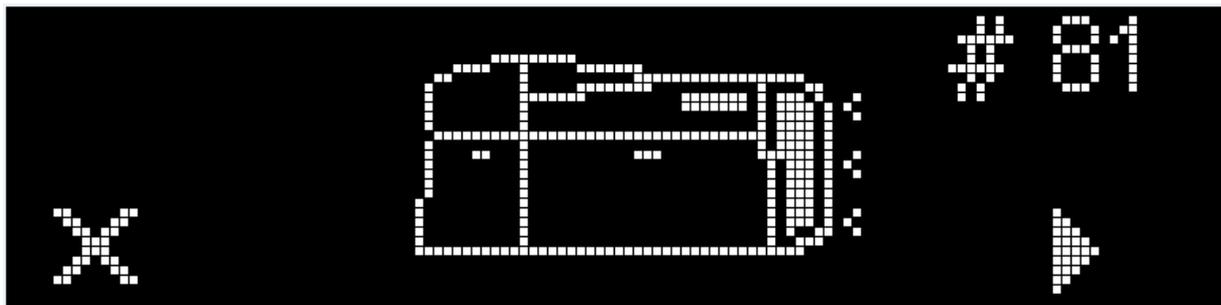

This section provides the troubleshooting table for the error message.

- When an error occurs in the printer, the PC shows the error message on screen with solutions.
- The display blinks in the location requiring attention. Locations can include the printer, input hopper, magnetic encoder, flipper, card path, ribbon, and data/communication device error.

Each table uses a 3-column presentation to display a specific or printer error message, its cause and its solution.

- This format allows the troubleshooter to identify the error and its cause, and then perform the procedure provided in the solution column.
- This standard mode of identifying the problem and its solution should provide an efficient method of troubleshooting this printer.
- If you encounter problems beyond the capabilities of this error message table, you should contact Technical Support.

Error Message	Cause	Solution
<b># 81 Unable to Feed</b>	The printer is unable to feed a card from the input card hopper.	<p>Check the following, then press the <b>Pause</b> button to continue.</p> <ul style="list-style-type: none"> <li>• Verify the card thickness setting is set to the thickness of your cards.</li> <li>• Verify the Cleaning roller is properly installed on the Ribbon Cartridge.</li> <li>• Check for card slippage. If necessary, run the Printer cleaning routine.</li> <li>• Verify that your cards are within the accepted card size range.</li> <li>• Verify the cards are not sticking together.</li> </ul>

### 5.2.3 Troubleshooting with the Error Message Table

Error Message	Cause	Solution
<b># 2</b> <b>Head Move Error</b>	The printhead lift has malfunctioned.	Reset the printer and try again. If this problem persists, call for technical assistance.
<b># 8</b> <b>Head Sensor Error</b>	The printhead temperature sensor is not functioning or is not connected properly. Or, the printhead is not cooling properly.	Reset the printer and try again. If the problem persists, call for technical assistance.
<b># 9</b> <b>Reboot Required</b>	An unspecified system error has been detected by the printer firmware.	Reset the printer and try again. If this problem persists, call for technical assistance.
<b># 25</b> <b>Ribbon not Installed</b>	No ribbon is installed in the printer.	Install a ribbon and retry.
<b># 30</b> <b>Mag Verify Error</b>	Magnetic encoding verification has failed.	Try encoding with a different card. Verify cards have the magnetic stripe. Replace the magnetic encoding module.
<b># 31</b> <b>No Mag Module</b>	The printer is not configured with the encoder data type that you are trying to send.	Ensure that no encoding data is being sent with the print job and reprint the card. Install a magnetic encoding module.
<b># 38</b> <b># 39</b> <b># 40</b> <b>EEPROM Corrupt</b> <b>EEPROM Read Error</b>	EEPROM is restored with factory default values.	If changes were made in the <b>Advanced Settings</b> tab in the printer driver, click the <b>Default</b> button to reset these numbers. Reset the printer and try again. If this problem persists, call for technical assistance.
<b># 44</b> <b>Flipper Jam/ Home Error</b>	A card has become jammed in the printer's flipper table. The flipper failed to position properly while aligning a card or flipping a card.	<ul style="list-style-type: none"> <li>Clear any cards in the flippertable using the buttons to move the card out. Resume printing.</li> <li>The flipper table should be level when the printer is powered up. If the flipper Table is at an angle, open the card output door and manually level it. Then cycle the printer power to reset.</li> <li>Reset the printer and retry. If problem persists call for technical assistance.</li> </ul>
<b># 45</b> <b>No Flip Module installed</b>	Request to print on 2 <sup>nd</sup> side of card, but no flipper is installed.	If a Flipper Module is present, ensure that the Print Both Sides option in the printer driver is set correctly. Install a flipper module.

Error Message	Cause	Solution
<b># 64</b> <b># 65</b> <b># 66</b> <b>Reboot Required</b>	Unspecified system error detected by the printer firmware.	Reset the printer and try again. If this problem persists, call for technical assistance.
<b># 68</b> <b>Card in Printer</b>	A card is jammed in the print station or card flipping area of the Printer.	Clear the jam and press the <b>Pause</b> button.
<b># 70</b> <b>Multiple Feed</b>	Multiple cards were fed into the printer.	<p>Verify the card thickness is set to the thickness of your cards, then press the <b>Pause</b> button.</p> <p>Check for card slippage. If necessary, run the printer cleaning routine</p> <p>Verify the cleaning roller is properly installed on the ribbon cartridge.</p> <p>Verify the cards are not sticking together.</p>
<b># 81</b> <b>Unable to Feed</b>	The printer is unable to feed a card from the input card hopper.	<p>Check the following, then press the <b>Pause</b> button to continue.</p> <p>Verify the card thickness setting is set to the thickness of your cards.</p> <p>Verify the Cleaning roller is properly installed on the Ribbon Cartridge.</p> <p>Check for card slippage. If necessary, run the Printer cleaning routine.</p> <p>Verify that your cards are within the perimeters accepted card size range.</p> <p>Verify the cards are not sticking together.</p>
<b># 82 Mag Jam</b>	A card is jammed magnetic station	Clear any cards in the magnetic station using the buttons to move the card out. Press the <b>Pause</b> button to continue.
<b># 91</b> <b>Ribbon Out</b>	The print ribbon has run out.	<p>Install a new ribbon.</p> <p>Press the <b>Pause</b> button to continue or the ON/OFF button to cancel.</p>
<b># 93</b> <b>Wrong Ribbon</b>	The print ribbon installed in the printer does not match the ribbon type selected in the printer driver.	<p>Change either the installed print ribbon or the ribbon type selected in the printer driver.</p> <p>Press the <b>Pause</b> button to continue or the ON/OFF button to cancel.</p>
<b># 97</b> <b>Ribbon Search Error</b>	<p>The ribbon is not able to find the next panel correctly.</p> <p>Check for jams/breaks.</p>	<p>Recalibrate the ribbon sensor.</p> <p>If broken, repair by taping the ribbon back on to the take- up core.</p> <p>Replace the ribbon.</p> <p>Press the <b>Pause</b> button to continue or the ON/OFF button to cancel.</p>

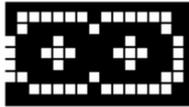

Error Message	Cause	Solution
# 99 Ribbon Error	The print ribbon has either broken or jammed.	If jammed, clear the jam. If broken, repair by taping the ribbon back on to the take- up core. Press the <b>Pause</b> button to continue or the ON/OFF button to cancel.
# 100 Ribbon RFID Error	There is no ribbon or the ribbon tag information is corrupted or incorrect.	Verify the printer driver settings for correct Ribbon. Try a new ribbon and continue. Press the ON/OFF button to cancel.
# 102 # 103 # 104 #3 Headlift Error	This is a problem with the printhead Lift.	Reset the printer and try again. If this problem persists, call for technical assistance.
# 106 Job Data Error	The print data sent to the printer is corrupt or has been interrupted.	Check the interface cable. Select the ON/OFF button to cancel this print job and then resend the job.
# 107 Printing Error	An error was detected during printing.	Reset the printer and try again. If this problem persists, call for technical assistance.
# 109 # 113 Ribbon Release Error	The printer cannot locate the next ribbon panel in order to release the ribbon from the card.	Ensure that the ribbon is not stuck to the card. Replace the ribbon. Recalibrate the ribbon sensor. If the ribbon is broken, repair by taping the ribbon back onto the take- up core and manually advance to the next panel. Press the <b>Pause</b> button to continue.
# 110 Card Jam/Align error	A card is jammed in the print station or card flipping area of the printer.	Clear the jam. Press the <b>Pause</b> button to continue.
# 111 Head Loading	An unrecoverable error has occurred during printing.	Reset the printer and try again. If this problem persists, call for technical assistance.
# 112 Card Jam/Align error	A card is jammed in the print station or card flipping area of the Printer.	Clear the jam. Press the <b>Pause</b> button to continue.
# 128 # 170 Calibrate Ribbon	The print ribbon sensor is out of calibration or has failed.	Calibrate the ribbon sensor. Check for material blocking sensor and try again.
# 131 Flipper Jam/ Home Error	A card has become jammed in the printer's flipper table. The flipper failed to position properly while aligning a card or flipping a card.	Clear any cards in the flipper table, using the buttons to move the card out. Resume printing. Reset the printer and retry. If problem persists call for technical assistance.

Error Message	Cause	Solution
<b># 136</b> <b>Secure Guard Print Disabled</b>	Printing is disabled by SecureGuard until a password is received.	Reset the printer and retry. If the problem persists, call for technical assistance.
<b># 139</b> <b>Please Remove Ribbon</b>	Ribbon needs to be removed.	Reset the printer and retry. If problem persists, call for technical assistance.
<b># 144</b> <b>EEPROM Corrupt</b> <b>EEPROM Read Error</b>	EEPROM restored with factory default values.	If changes were made in the <b>Advanced Setting</b> tab in the printer driver, click the <b>Default</b> button to reset these numbers. Reset the printer and try again. If this problem persists, call for technical assistance.
<b>#202</b> <b>Encoder not installed</b>	You are trying to send encoding data, but the Printer is not configured with this Encoder type. iCLASS, Prox, Mifare, SmartCard	Ensure that no encoding data is being sent with the print job and reprint the card. Install an encoding module.

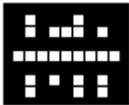

**5.2.4 Printer-Specific Tools**

The status icons are as follows:

This icon indicates that the print ribbon supply is low and will require replacement soon.

This icon indicates that the printer needs to be cleaned.

This icon is only displayed for printers with an attached dual-input card hopper and indicates that the top input hopper is currently selected.

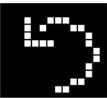

This icon is only displayed for printers with an attached dual-input card hopper and indicates that the bottom input hopper is currently selected.

Press the  button to scroll through the details of the printer and perform the action.

Press the  button to select the option.

When  is selected, use the left down arrow  to scroll through the Info, Test Prints, and Languages and Exit.

Use the corner arrow  to run that option.

The curved arrow  will return to the first screen.

#### 5.2.4.1 Additional Printer Specific Tools

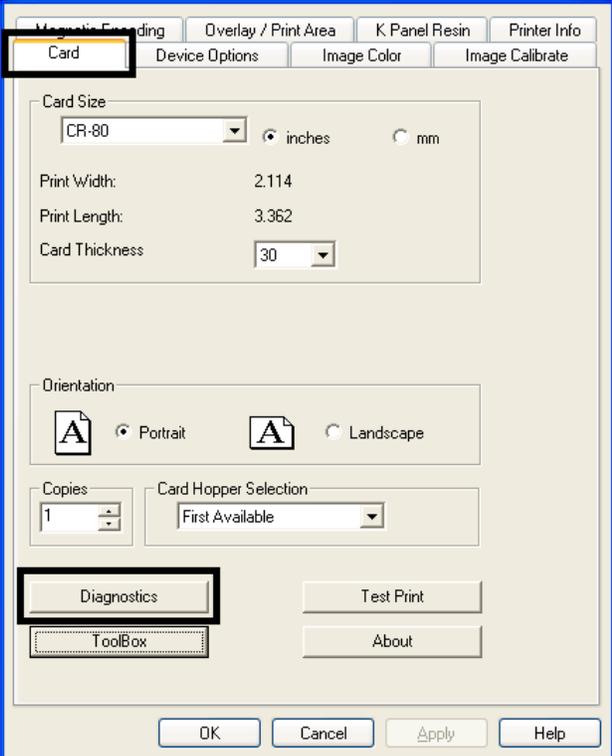

Label	Description
INFO	<ul style="list-style-type: none"> <li>• Printer Type</li> <li>• Firmware Version</li> <li>• IP Address</li> <li>• Flipper</li> <li>• Lamination</li> <li>• Magnetics</li> <li>• E-Card</li> <li>• Password</li> <li>• Card count</li> </ul>
TEST PRINTS	<p><b>Color Photo:</b> Select this to print a color card to test communication and integrity.</p> <p><b>Alignment:</b> Select this to print a card used to align the print image on the card.</p> <p><b>Settings:</b> Select this to print a card with the Advanced settings.</p> <p><b>Resin:</b> Select this to print a RESIN test card.</p> <p><b>Rewritable:</b> Select this to ERASE the Rewritable card.</p> <p><b>Magnetic:</b> Select this to test Magnetic encoding. (Hi-Co only)</p> <p><b>Lamination:</b> Select this to laminate a test card.</p>
Hopper Select	Ability to select which hopper to feed cards from. Applies to Dual Hopper Printers.

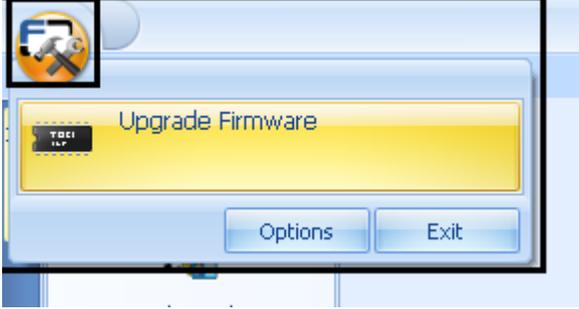

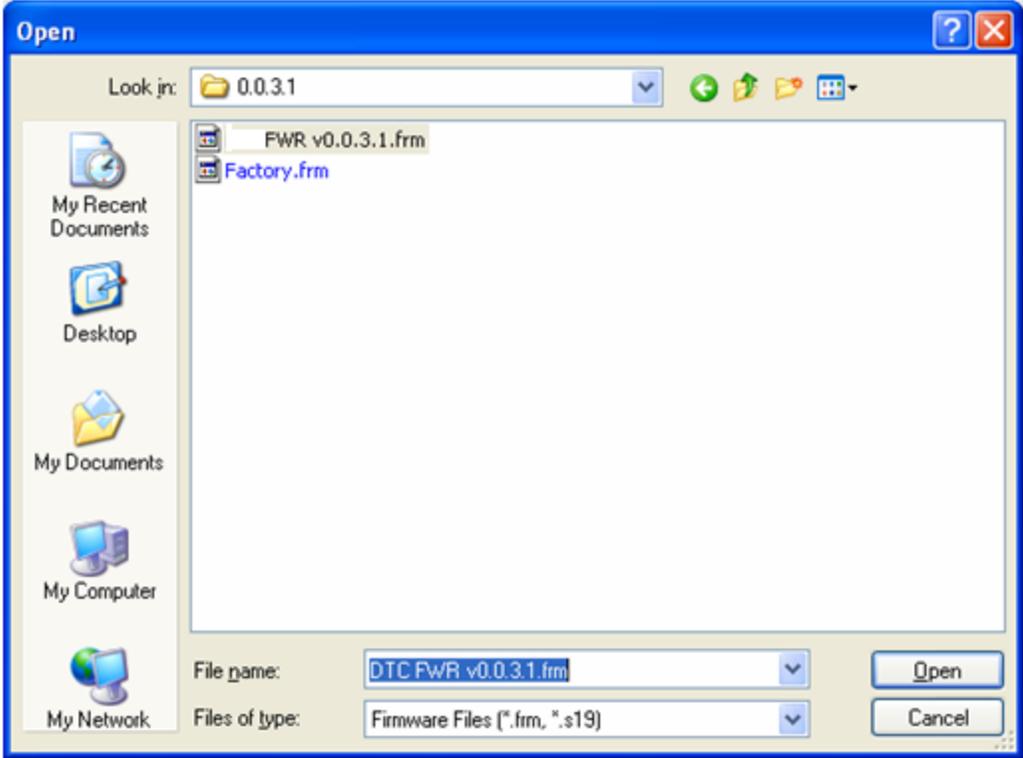

<b>Label</b>	<b>Description</b>
<b>Toolbox</b>	<b>Clean Printer:</b> Select this to run the clean printer routine. <b>Clean Laminator:</b> Select this to run the clean laminator routine. <b>Calibrate Mag:</b> Select this to calibrate the Magnetic Sensor <b>Calibrate Rib Sensor:</b> Select this to calibrate the ribbon sensor. <b>Network:</b> Select this to configure network options.
<b>Language</b>	<b>Language:</b> Select this choice to change the Printer Displayed Language.
<b>Exit</b>	<b>Exit:</b> Select this choice to exit the Printer Tool options.

## 6 Firmware Upgrades

### 6.1 Upgrade the Printer Firmware

To upgrade the printer firmware, perform the following steps.

Step	Procedure
1	<b>Requirements</b> <ul style="list-style-type: none"> <li>• Internet access</li> <li>• Printer powered up and connected to PC</li> </ul>
2	<p>Open the FARGO Workbench Printer Utility or use the <b>Diagnostics</b> button from the <b>Card</b> tab of the <b>Printing Preference</b> page.</p> <p><b>Note:</b> Workbench is also available from the FARGO Folder in the Windows Program folder.</p> 

Step	Procedure
3	<p>From the Application Icon, select Upgrade Firmware.</p> 
4	<p>Find the Firmware via <b>Check for Firmware Updates</b> at the HID Global website.</p> <ul style="list-style-type: none"> <li>• Save the file to a folder. (Double-click the file to unzip the file.)</li> <li>• Use the <b>Browse</b> button to find the .frm file.</li> <li>• Select the file and click <b>Open</b>.</li> </ul> 
5	Click <b>Upgrade</b> to start the upgrade process.
6	The <b>LOADING FIRMWARE</b> message displays while the Firmware is updating.
7	Reboot the printer if it does not reboot automatically.

## 7 HID Global Technical Support

This section provides you with an efficient, step-by-step procedure to be used when contacting HID Global Technical Support, as needed, for this card printer.

Step	Procedure
1	Contact the HID Global Technical Support Group by phone at (866)607-7339 Ext #6 or by fax at (952) 946-8492 for additional technical assistance. <b>OR</b> Contact HID Technical Support via the HID Global website.
2	Position a phone near the printer and computer so the Technician can help to troubleshoot the printer.
3	Please have a self-test and a sample card ready when calling HID Technical Support.

### 7.1 Reading the Serial Numbers on a FARGO Printer

You can determine when your card printer was manufactured by reading directly from the serial number (affixed to your card printer).

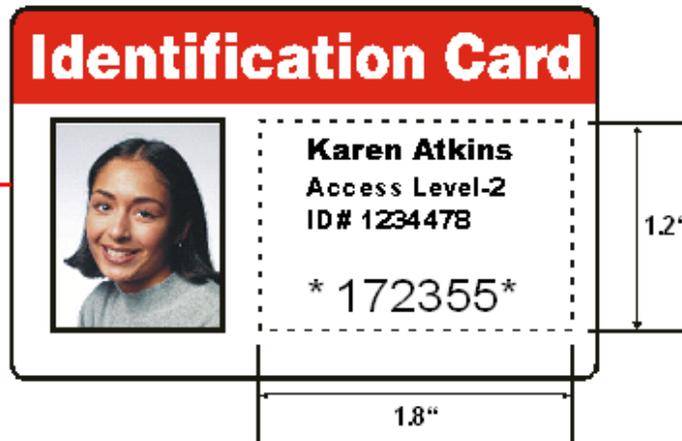

Example	Explanation
Reviewing Example No. 2: Serial Number B2050028 (2012)	<ul style="list-style-type: none"> <li>• <b>B2050028:</b> The first two digits in the serial number indicate the year the printer was built (e.g., the digits B2 indicate the year 2012).</li> <li>• <b>B2050028:</b> The third and fourth digits in the serial number indicate the week the printer was built (e.g., the digits 05 indicate week 5 of that year).</li> <li>• <b>B2050028:</b> The last four digits indicate the sequence number for the numeric order in which the printers were built.</li> </ul>

## 8 Appendix A

### 8.1 Defined Area

The **Defined Area** option can be used with the K-Panel or the Overlay / Print Area procedure to define specific areas. The K-Panel procedure is described below. The same process is used for the Overlay / Print Area option.

- Select **Defined Area(s)** for the Printer Driver to print the resin black (K) panel for all black found only in a desired and defined area or areas.
- Click **Defined Area(s)**, which will activate the card grid in the upper half of the window. It is through this card grid that up to five areas can be defined.
- Determine the area of the card necessary to define. In the sample, this area is indicated by the dashed outline.
- Determine the size of this area by actually printing a card and looking at it in the same orientation as when it exits the Printer.
- Measure the total size for the area and enter those dimensions into the dimension boxes.
- Once the area is sized properly, measure from the lower left corner of the card up and over to the lower left corner for the defined area. Enter these values into the X and Y boxes.

- Print the card design and note how the image is oriented on the card as it ejects from the Printer.
- Measure the defined area location based on the printed card.
- Define another area by clicking the Defined Area up arrow.
- Use the Defined Area arrows to navigate back and forth from area to area.
- Delete an area by using the Defined Area arrows to select the area.
